TECHNICAL NOTE

Concept and Definition

The Consumer Price Index (CPI) is designed to measure the average price changes of a fixed basket of consumption goods and services commonly purchased by resident households over time. The CPI is widely used and analysed as a measure of consumer price inflation. It measures price movements (i.e. change in prices) but not absolute price levels at a point in time.

The weighting pattern for the 2024-based CPI was derived from the expenditure values obtained from the Household Expenditure Survey (HES) 2023, and updated to 2024 values by taking into account price changes between 2023 and 2024.

Scope and Coverage

The CPI covers only household consumption expenditure incurred by resident households, which refer to households where the household reference person is a Singapore Citizen or Permanent Resident. It excludes non-consumption expenditure such as loan repayments, income taxes, purchases of houses, shares, and other financial assets etc.

A total of 6,800 brands/varieties are included in the 2024-based CPI basket and they are classified into ten main expenditure divisions based largely on the Classification of Individual Consumption According to Purpose (COICOP). The total number of outlets selected for pricing is about 4,500.

Measurement of Changes in the Consumer Price Index

The CPI is compiled on a monthly basis. For longer periods, the CPI is derived by taking a simple average of the monthly indices. For example, the yearly CPI is derived by taking a simple average of the 12 months' indices for the year.

To compute month-on-month change, the difference between the CPI for the specific month and that for the preceding month expressed in percentage term is used. This measures the change in average prices between the two months and serves as a useful short-term indicator of price movement.

To measure the year-on-year change, the CPI for the specific month is compared with that for the same month of preceding year. Likewise, the annual inflation rate for a specific year is computed by comparing the average for the 12 monthly indices with that for the preceding year.

Consumer Price Index for All Items

Highest level of the CPI, containing all the divisions, groups and classes.

Pricing Indicators for Actual Rentals and Imputed Rentals for Housing Indices

For the computation of the Actual Rentals for Housing index, the Department of Statistics (DOS) uses actual rental data for the entire rental market obtained from administrative sources. These rental data refer to the actual rental paid for rented units, regardless of when the leases were signed, i.e., including new and renewed leases signed in the period and existing leases signed earlier. This reflects the actual consumption pattern of the population renting accommodation as households are paying rentals according to the contract signed, and not all are paying rental at the prevailing market rates of the period. In addition, the CPI for Actual Rentals for Housing also comprises monthly rentals for rooms as well as university hostel fees.

For the computation of the Imputed Rentals for Housing index in the CPI, DOS adopts the rental equivalence method which measures the expected rental the homeowner would have to pay if he/she were a tenant of the premise. This method is one of the approaches recommended by international organisations such as the International Labour Organisation (ILO) and the United Nations (UN), and has been widely adopted by many countries. The Imputed Rentals cost in CPI comprises rentals that are imputed for owner-occupied homes and the pricing indicator is the rental data for the entire rental market. Indices at detailed levels are stratified by house type and aggregated using weights derived from annual values of owner-occupied households.

Consumer Price Indices for All Items less Accommodation and All Items less Imputed Rentals for Housing

Accommodation, one of the groups in the Housing & Utilities expenditure division of the CPI, comprises Actual Rentals for Housing, Imputed Rentals for Housing, as well as Housing Maintenance & Repairs.

A significant share of the Accommodation group is Imputed Rentals for Housing, which reflects the costs to homeowners of utilising the flow of services provided by their homes over an extended period of time. Given that the cost of using housing services is not directly observed for homeowners, it is computed based on the imputed rental concept under the rental equivalence method, i.e., proxied by market rentals of similar properties. This provides an estimated rental value for the owned home, as though the homeowner were renting it from themselves. Housing price is not considered in the CPI as it has a high investment component and is treated as a capital good. As for the CPI for Housing Maintenance & Repairs, it takes into account the rebates for Service & Conservancy Charges (S&CC) disbursed to households living in Housing and Development Board (HDB) flats in the applicable months.

Imputed Rentals have no impact on the cash expenditures of most households in Singapore as they already own their homes, while the inclusion of S&CC rebates results in some volatility in the monthly CPI. As such, the CPIs for All Items less Accommodation and All Items less Imputed Rentals for Housing are compiled and published as additional indicators. For the CPI for All Items less Imputed Rentals for Housing, actual rentals paid on rented units are still included in the measure.

Monetary Authority of Singapore's Core Inflation Measure

The Monetary Authority of Singapore (MAS) monitors a core inflation measure that excludes the components of "Accommodation" and "Private Transport".
