price statistics

**REBASING OF  
IMPORT AND EXPORT PRICE INDICES  
(Base Year 2023=100)**

Singapore Department of Statistics  
February 2024

Papers in this Information Paper Series are intended to inform and clarify conceptual and methodological changes and improvements in official statistics. The views expressed are based on the latest methodological developments in the international statistical community. Statistical estimates presented in the papers are based on new or revised official statistics compiled from the best available data. Comments and suggestions are welcome.

# Our Vision

National Statistical Service of Quality, Integrity and Expertise

# Our Mission

We deliver Insightful Statistics and Trusted Statistical Services that  
Empower Decision Making

# Our Guiding Principles

<b>Professionalism &amp; Expertise</b>	<i>We adhere to professional ethics and develop statistical competency to produce quality statistics that comply with international concepts and best practices.</i>
<b>Relevance &amp; Reliability</b>	<i>We produce statistics that users need and trust.</i>
<b>Accessibility</b>	<i>We facilitate ease of access to our statistics through user-friendly platforms.</i>
<b>Confidentiality</b>	<i>We protect the confidentiality of individual information collected by us.</i>
<b>Timeliness</b>	<i>We disseminate statistics at the earliest possible date while maintaining data quality.</i>
<b>Innovation</b>	<i>We constantly seek ways to improve our processes, leveraging on new technology, to deliver better products and services to users.</i>
<b>Collaboration</b>	<i>We engage users on data needs, data providers and respondents on supply of data, and undertake the role of national statistical coordination.</i>
<b>Effectiveness</b>	<i>We optimise resource utilisation, leveraging administrative and alternative data sources to ease respondent burden.</i>

# **REBASING OF IMPORT AND EXPORT PRICE INDICES (Base Year 2023 = 100)**

## **I INTRODUCTION**

The Department of Statistics (DOS) has rebased the Import Price Index (IPI) and Export Price Index (EPI) from the base year of 2018 to 2023. The rebasing exercise is conducted periodically to ensure that the baskets of commodities and composition of imported and exported products are representative of current trade patterns.

The IPI and EPI track changes in the monthly prices of imported and exported goods respectively. The indices are also used as price deflators to estimate the volume of international trade and to compile constant price national accounts estimates.

This information paper provides details on the rebasing of the IPI and EPI to reference year 2023. In addition, this paper compares the weighting patterns and trends of the 2023-based price indices with those of the 2018-based series.

## **II METHODOLOGY**

### **Index Structure and Classification**

The index structure of the IPI and EPI is in accordance with the Standard International Trade Classification, Revision 4.1 (SITC Rev 4.1)<sup>1</sup>. Figure 1 illustrates the structure of the IPI and EPI. The lowest level comprises the brand prices of the imported and exported products. The indices at the 7-digit commodity item level and the attached weights form the elementary aggregates, from which the indices at the 3-digit group level, 2-digit division level, 1-digit section level and lastly the overall IPI and EPI are built up.

### **Weights Determination**

The weights at the 1-digit, 2-digit, 3-digit and 7-digit level SITC for the IPI and EPI are derived from the 2023 import and export values<sup>2</sup> respectively. At the brand level, equal weights are assigned to the individual brands within the elementary aggregates (sub-indices at the 7-digit commodity item level).

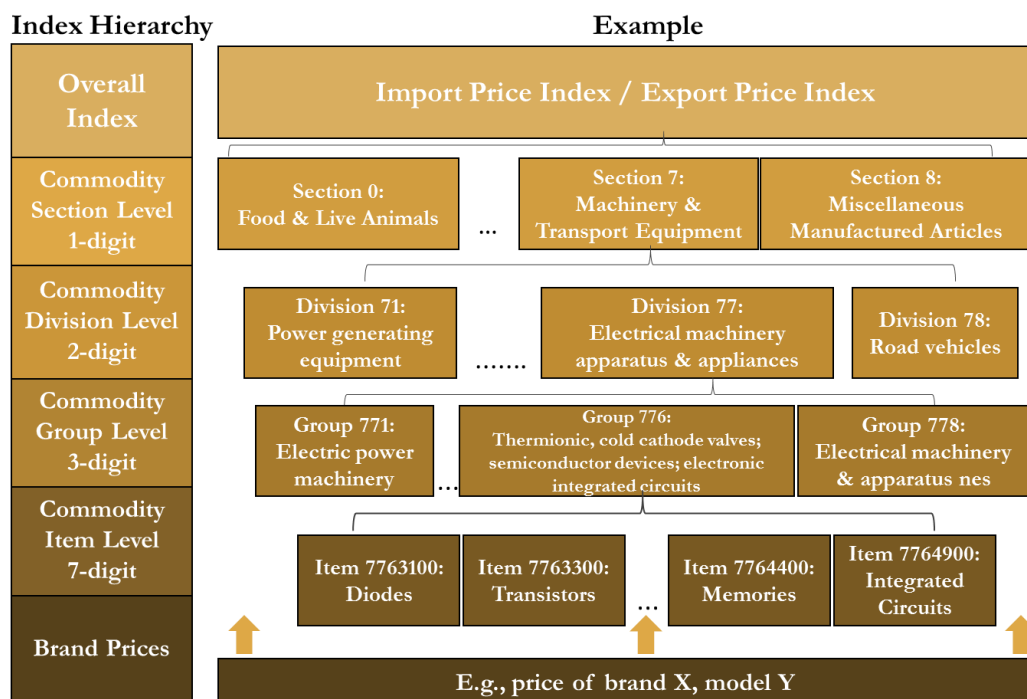

The IPI and EPI baskets contain selected commodity items which are representative of the trade patterns of Singapore. The weights of the non-selected commodity items are distributed across the appropriate commodity items which share similar product characteristics based on the assumption that price trends of similar items move in tandem.

---

<sup>1</sup> The Standard International Trade Classification is a product classification of the United Nations used for the publication of external trade statistics (export and import values and volumes of goods), allowing for international comparisons of commodities and manufactured goods. Information on the SITC v4.1 can be found at: [www.stats.un.org/unsd/trade/sitcrev4.htm](http://www.stats.un.org/unsd/trade/sitcrev4.htm).

<sup>2</sup> Source: Enterprise Singapore. The published data by commodity section are available at: <https://tablebuilder.singstat.gov.sg/table/TS/M451001>

**Figure 1: Index Structure of IPI and EPI**

## Index Computation

The 2023-based series is compiled using the Laspeyres formula where the base price period and weight reference period are aligned to the same year. The elementary aggregates are the geometric means of the price relatives of the commodity brands at the 7-digit commodity item level. Price indices at higher levels of aggregation are progressively built up from the arithmetic means of the weighted sub-indices at 3-digit group level, 2-digit division level and 1-digit section level to the overall index. Details on the index computation method are shown in Appendix I.

## Linking of Historical Series Across Different Base Years

The price indices prior to 2023 are linked to the new series by re-scaling them to the new base year 2023 level. The linking is obtained through the following mathematical procedure:

$$\text{Linked (2023-based) Index} = \text{2018-Based Index} \times \text{Linked Coefficient}$$

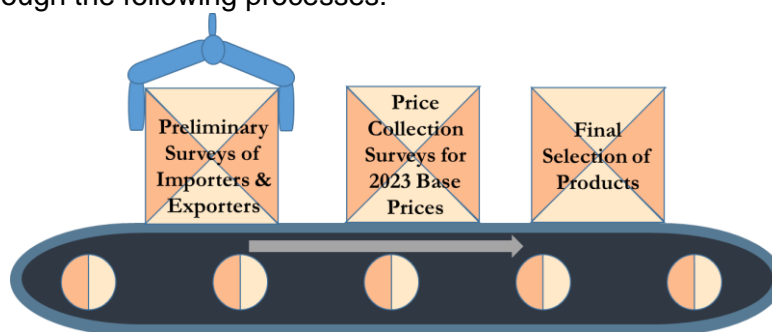

where the Linked Coefficient is the ratio of the annual 2023-based index in 2023 to the annual 2018-based index in 2023.

Example:

Annual 2023-based Index in 2023	= 100
Annual 2018-based Index in 2023	= 108
Linked Coefficient	= 100/108 = 0.926
Thus, if a 2018-based Index in January 2022	= 111
Then the 2023-based Index in January 2022	= 111 x 0.926 = 102.9

### III ITEMS AND PRODUCTS SELECTION

During the rebasing exercise, the products included in the IPI and EPI baskets were reviewed and updated through the following processes:

#### Preliminary Surveys of Importers and Exporters

Preliminary surveys of importers and exporters were initiated to collect characteristics of the commodity items traded by the selected importers and exporters, such as detailed information on the lists of products, models or brands. The survey returns were used to shortlist the importers, exporters and the commodity brands for subsequent price collections.

##### (i) Sampling Method

The initial sampling frames for the preliminary surveys of importers and exporters were based on the 2022 trade databases<sup>3</sup> which contained the list of traders and the types and values of the commodities items imported and exported in 2022.

Purposive sampling was adopted in the 2023 rebasing exercise. This method ensured that commodity items that were significant were selected for the baskets of the rebased IPI and EPI thereby reduced the overall sample sizes of importers and exporters without compromising the quality of the compiled price indices.

The SITC 7-digit commodity items were chosen based on the import and export shares within the various categories of products. The purposive sampling method involved progressive selections of SITC codes from the highest to the lowest levels of the SITC. The first step was to compile the weights at the 1-digit and 7-digit SITC levels. Within each commodity section starting from the 1-digit SITC, the corresponding 7-digit SITCs with relatively significant weights were selected to form the sample. This approach ensured that only commodity items with significant contributions to the higher level SITCs were selected. After selection, the weights at the 2-digit and 3-digit SITC levels were aggregated from the selected 7-digit SITC codes.

The major importers and exporters for each of the commodity items selected were then identified to take part in the preliminary surveys to collect detailed product, model or brand specifications for subsequent product selections and price collections. Approximately 2,700 importers and 1,600 exporters were selected to participate in the preliminary surveys for the IPI and EPI respectively.

---

<sup>3</sup> International Merchandise Trade Statistics compiled by Enterprise Singapore

## (ii) Information Collected through the Preliminary Surveys

The respondents were requested to provide detailed specifications and descriptions of their key products for each commodity item stated in their customised survey forms. Information such as the brand, grade, size-measurement, type of packaging & other distinguishing features, country of origin, frequency of imports or exports, unit of measurement, and prices charged for the respective months were collected. Prices of imported products and exported commodities were quoted in cost, insurance and freight<sup>4</sup> (CIF) and free on board<sup>5</sup> (FOB) terms respectively, in line with the valuations adopted for corresponding statistics on merchandise imports and exports.

## (iii) Selection of Importers/ Exporters, Commodity Items and Products

The survey returns were reviewed, and where necessary, verified with the respondents to ensure that the products provided were within the scope of the selected commodity items. The selection of respondents and products for price collection was based on the following criteria:

- a) Import or export of the commodity items should be regular and frequent;
- b) Item descriptions should be specific and sufficiently detailed for price collection; and
- c) Selected products should constitute a significant share of the companies' imports or exports.

## Price Collection Surveys

After the completion of preliminary surveys, price surveys were then conducted at regular intervals to collect prices for the selected products from the respective importers and exporters for the compilation of the base year price indices.

Selected importers/ exporters received customised survey forms with pre-printed descriptions of the selected commodity products, models or brands, as well as the previously provided prices of these items. These respondents then provided the latest prices for the products on the 15th of each month, or the nearest date.

Prices obtained were checked to ensure their reasonableness, consistency and accuracy. At compilation, all prices quoted in foreign currencies were converted to Singapore dollar using the prevailing average monthly exchange rates published by the Monetary Authority of Singapore. The prices of the selected products were monitored over a 12-month period. Products which could not be priced regularly or had volatile price trends were either removed or replaced.

---

<sup>4</sup> Prices quoted in CIF include the cost of item, freight charges, and freight insurance up to the buyer's destination port.

<sup>5</sup> Price quoted in FOB include cost of item, and fees incurred up to port of origin, including customs clearance at port of origin.

## Final Selection of Products for the 2023-based IPI and EPI

The final selection of the imported and exported products was completed in January 2024. The number of establishments, commodity items and products collected for the compilation of the monthly 2023-based IPI and EPI is shown in Figure 2. More information on the number of commodity divisions, groups and items for the IPI and EPI, is provided in Appendix II. The 2023 weights at the commodity section and group levels for the IPI and EPI are presented in Appendices IIIA and IIIB respectively.

**Figure 2: Monthly Price Survey Coverage**

	 Establishments Covered	 Commodity Items	 Prices Selected
<b>Import Price Index</b>	843	546	2,521
<b>Export Price Index</b>	527	315	1,590

## IV COMPARISON OF WEIGHTING PATTERNS AND PRICE TRENDS

### Import Price Index

Figure 3 illustrates the weights distributions of the 2023-based IPI. The Machinery & Transport Equipment and Oil (Mineral Fuels) sections continued to be dominant, constituting a total of 72.5 per cent of the weights distribution.

**Figure 3: Weights of the 2023-based IPI**

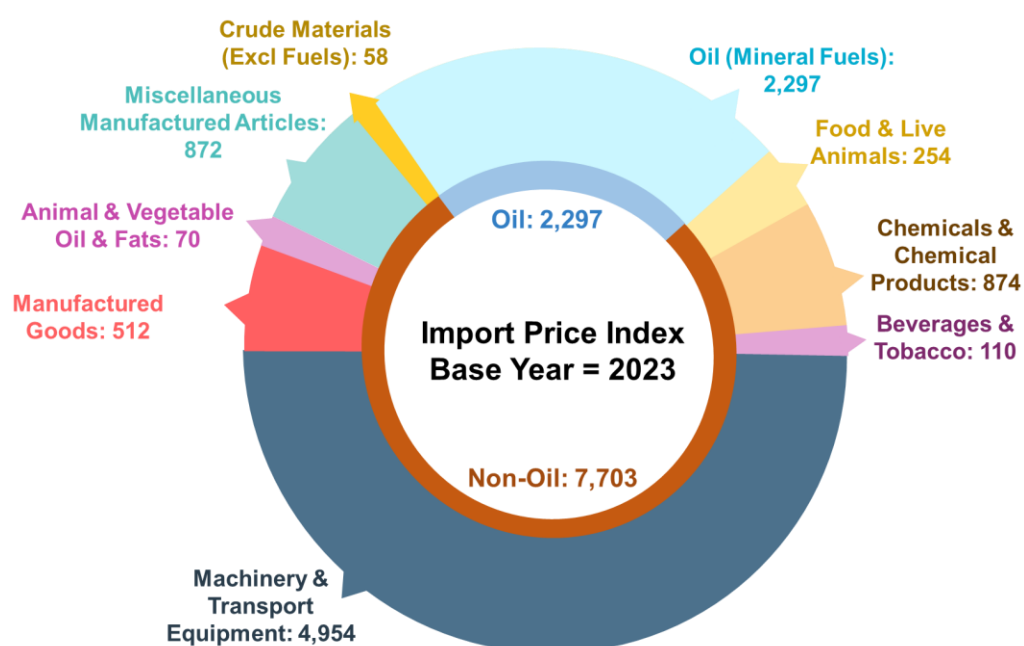

Table 1 lists and compares the rank order and differences in the 2023-based and 2018-based IPI weights. The rank order in both base years are similar, with Machinery & Transport Equipment section maintaining its first rank in terms of weights share in the new basket.

**Table 1: Weights Comparison and Rank Order of 2023-Based and 2018-Based IPI**

Commodity Section	2023 Weights	2018 Weights	Difference	2023 Rank	2018 Rank
Machinery & Transport Equipment	4,954	4,690	+264	1	1
Oil (Mineral Fuels)	2,297	2,590	-293	2	2
Chemicals & Chemical Products	874	888	-14	3	3
Miscellaneous Manufactured Articles	872	857	+15	4	4
Manufactured Goods	512	505	+7	5	5
Food & Live Animals	254	247	+7	6	6
Beverages & Tobacco	110	112	-2	7	7
Crude Materials (Excl Fuels)	58	84	-26	8	8
Animal & Vegetable Oils, Fats & Waxes	70	27	+43	9	9

*\*Weights may not sum to 10,000 due to rounding.*

Figure 4 ranks the commodity sections based on the weights differences across the two base years. Notably, the Oil (Mineral Fuels) section declined 2.9 percentage points due to the fall in relative weights share of petroleum and petroleum-related products, as well as natural gas. On the other hand, the Machinery & Transport Equipment section rose 2.6 percentage points against the 2018-based IPI, due to higher contributions from power-generating machinery and equipment, such as engines and motors.

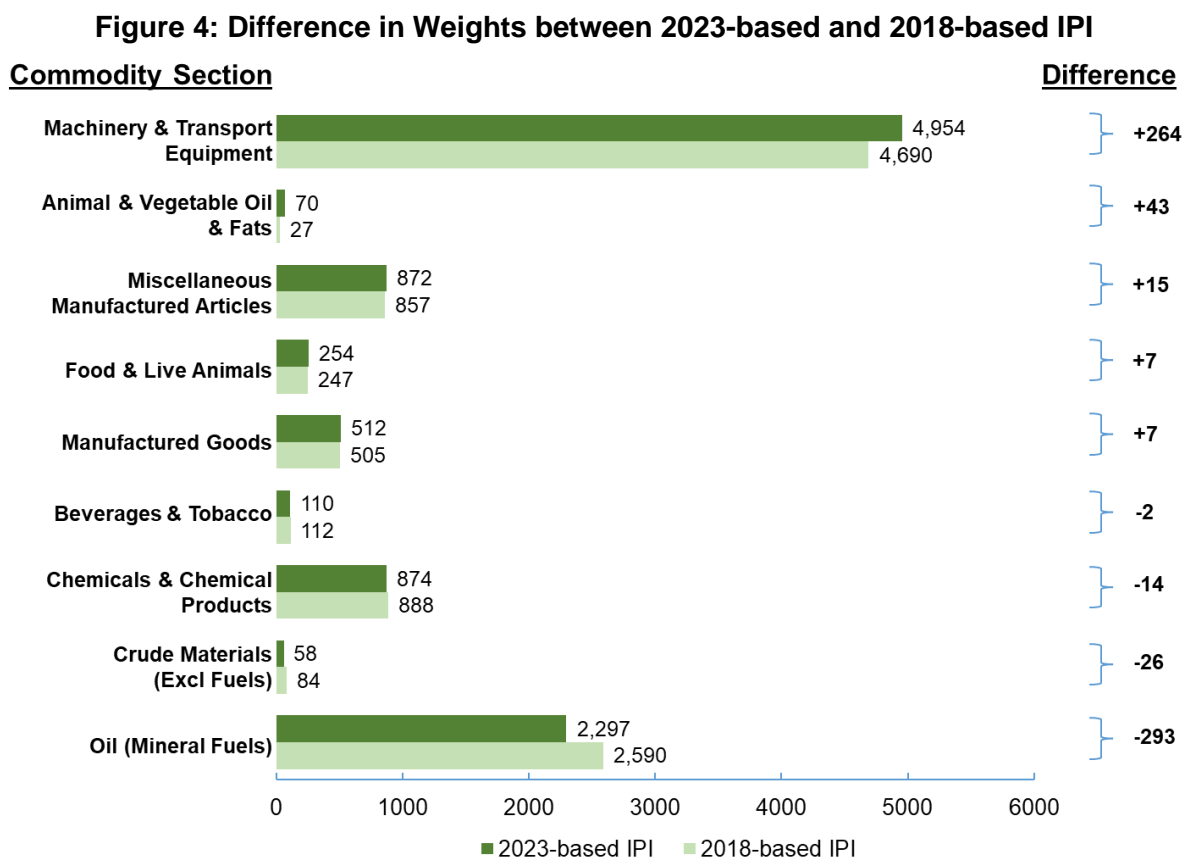

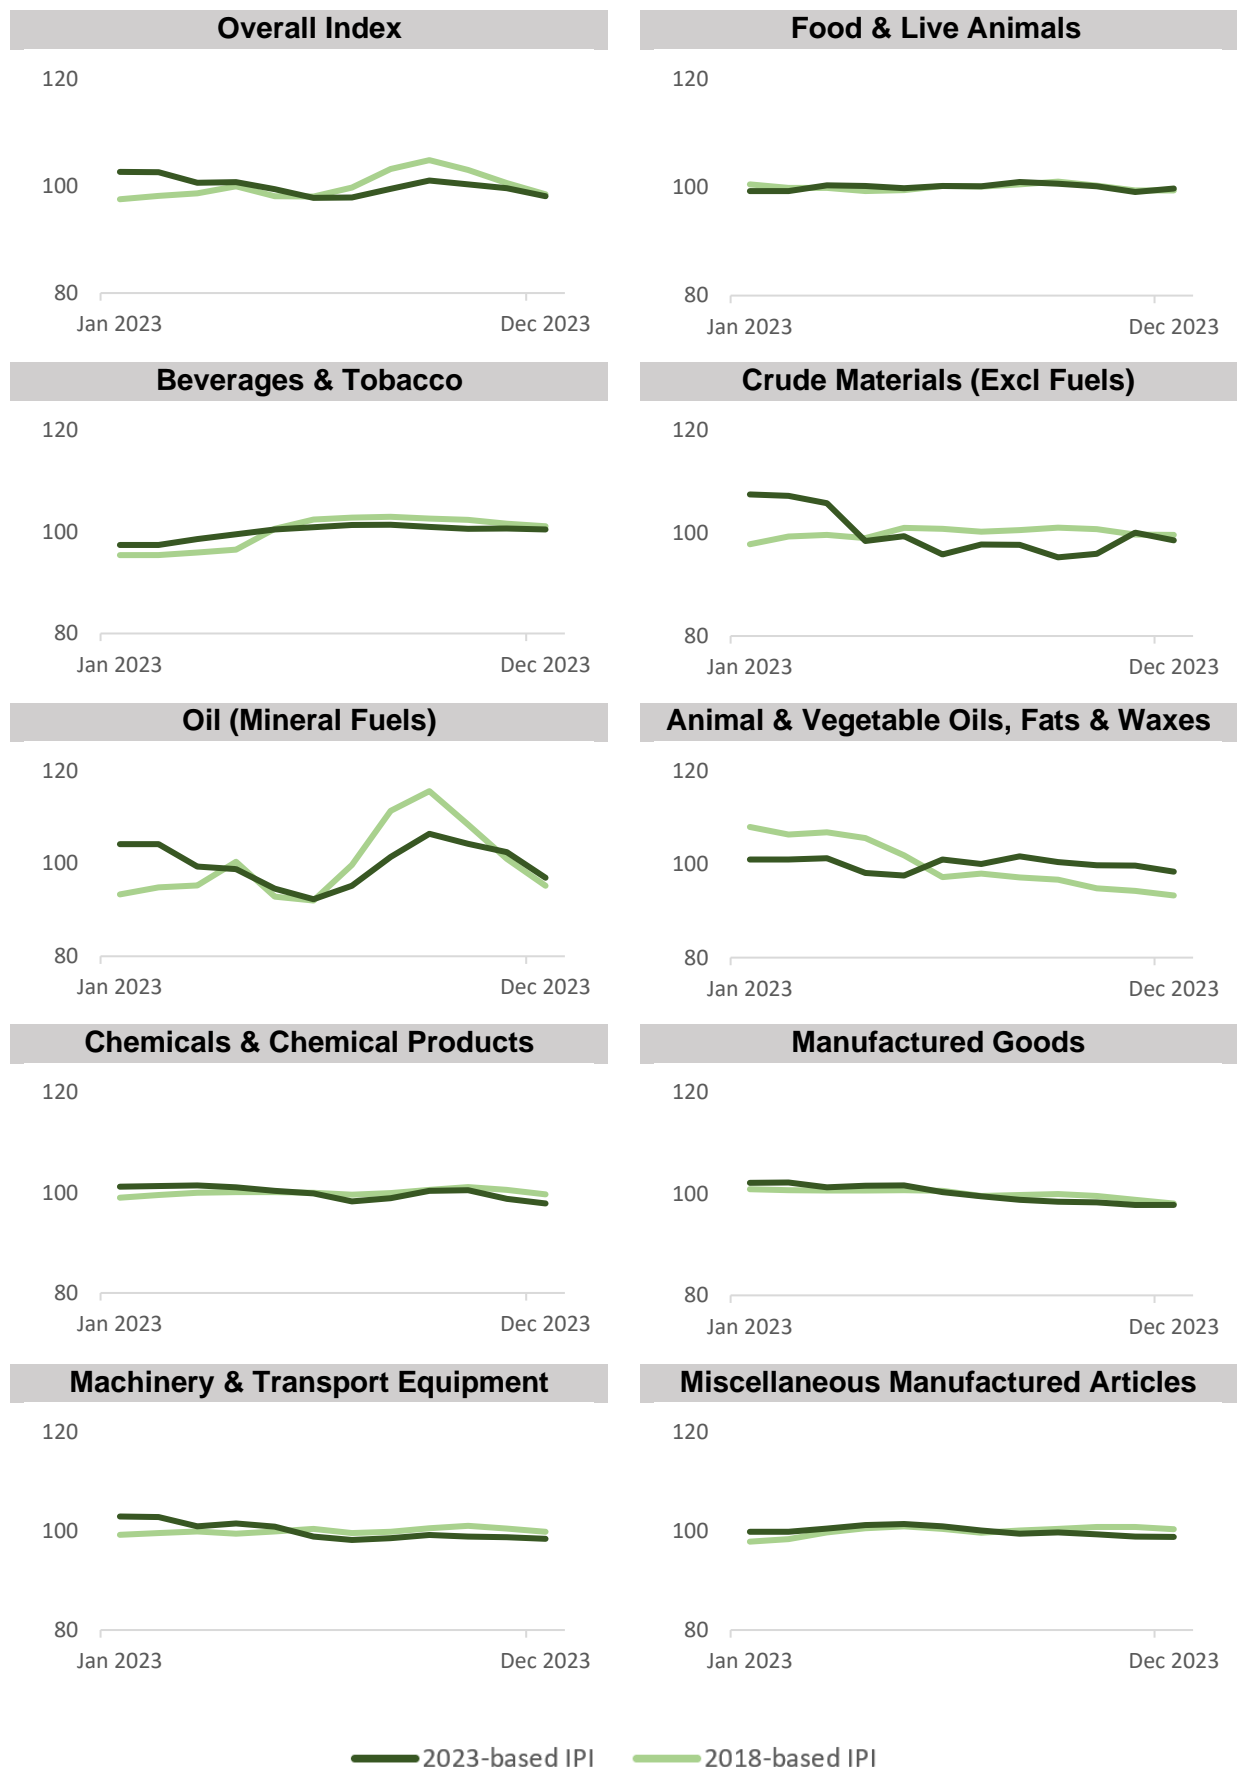

Figure 5 compares the price trends of the 2023-based and 2018-based IPIs by commodity section from January to December of 2023, the overlapping period between the two series. The price trends of the overall index for both base years generally moved in tandem, with slight differences in magnitude especially in Q1 and Q3, mainly due to the Machinery & Transport Equipment and Oil (Mineral Fuels) sections respectively. The differences in the price trends in these two sections were largely due to changes in composition and product mix.

**Figure 5: 2023-based and 2018-based IPI from January to December 2023**

## Export Price Index

The weights distribution of the 2023-based EPI is shown in Figure 6. The Machinery & Transport Equipment and Oil (Mineral Fuels) sections remained dominant in the EPI, with a combined share of 71.6 per cent of the weights distribution.

**Figure 6: Weights of the 2023-based EPI**

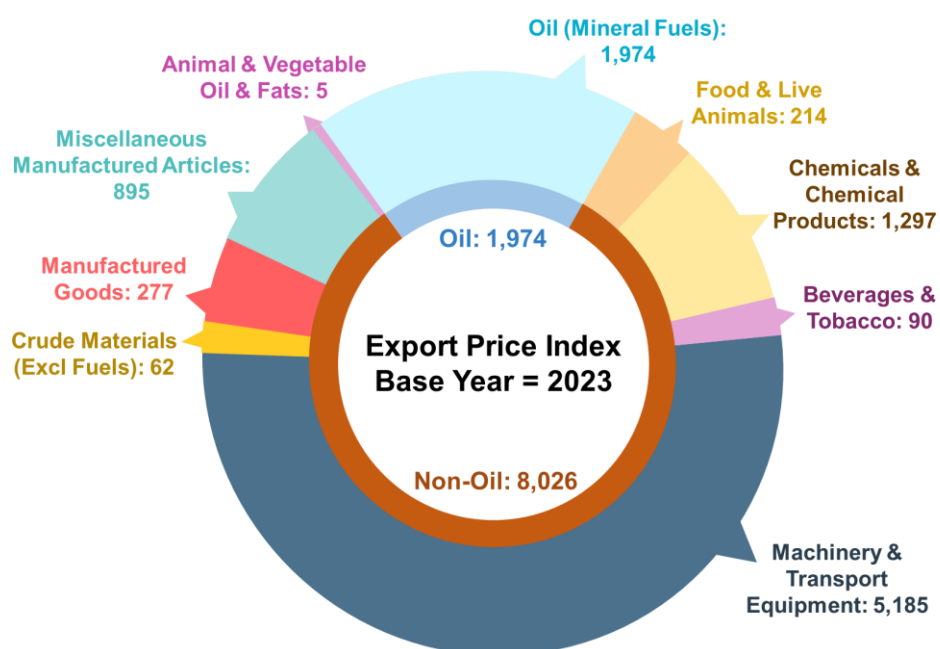

Table 2 lists and compares the rank order and differences in the 2023-based and 2018-based EPI weights. The rank order in both base years were the same, led by the Machinery & Transport Equipment section, followed by the Oil (Mineral Fuels) and Chemicals & Chemical Products sections.

**Table 2: Weights Comparison and Rank Order of 2023-Based and 2018-Based EPI**

Commodity Section	2023 Weights	2018 Weights	Difference	2023 Rank	2018 Rank
Machinery & Transport Equipment	5,185	4,836	+349	1	1
Oil (Mineral Fuels)	1,974	1,978	-4	2	2
Chemicals & Chemical Products	1,297	1,525	-228	3	3
Miscellaneous Manufactured Articles	895	908	-13	4	4
Manufactured Goods	277	318	-41	5	5
Food & Live Animals	214	236	-22	6	6
Beverages & Tobacco	90	103	-13	7	7
Crude Materials (Excl Fuels)	62	91	-29	8	8
Animal & Vegetable Oils, Fats & Waxes	5	5	0	9	9

Figure 7 ranks the commodity sections based on the weights differences across the two base years. The weights of the Oil (Mineral Fuels) section remained relatively similar between base years 2018 and 2023. The Machinery & Transport Equipment section increased 3.5 percentage points, mainly attributed to the rise in the relative weights of machinery and apparatus.

**Figure 7: Difference in Weights between 2023-based and 2018-based EPI**

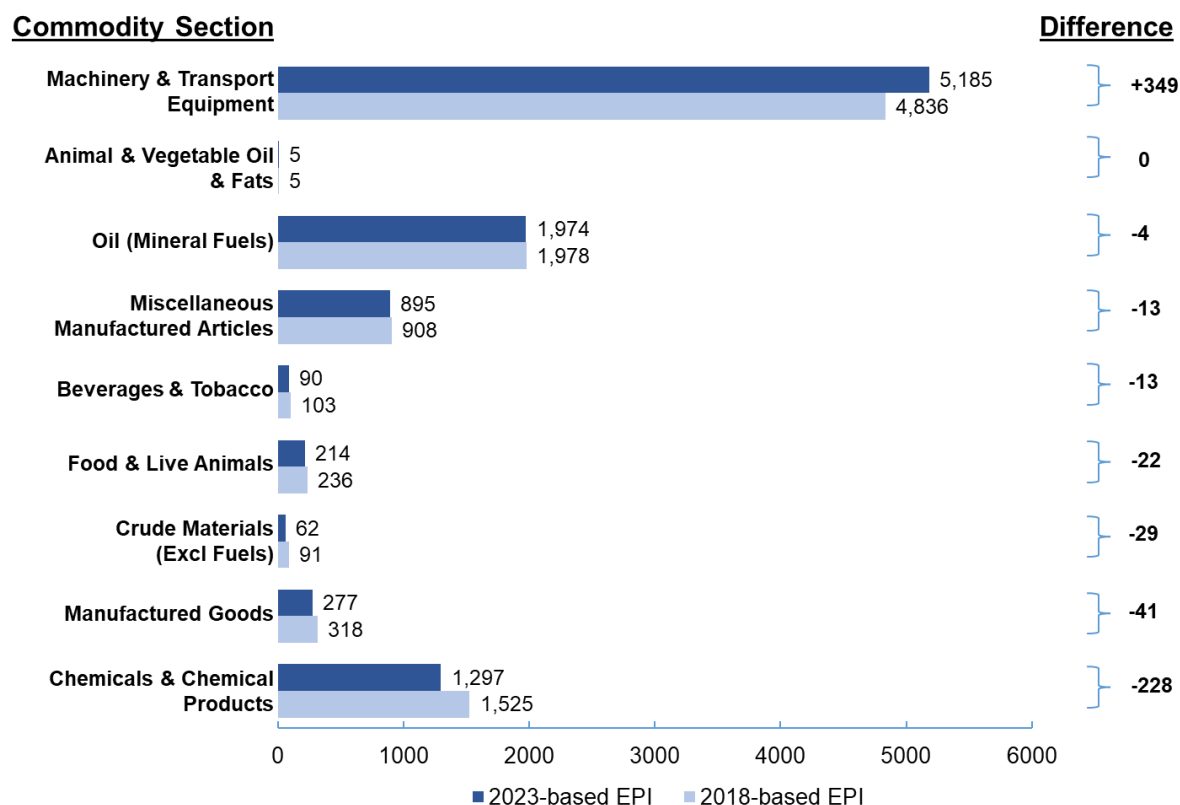

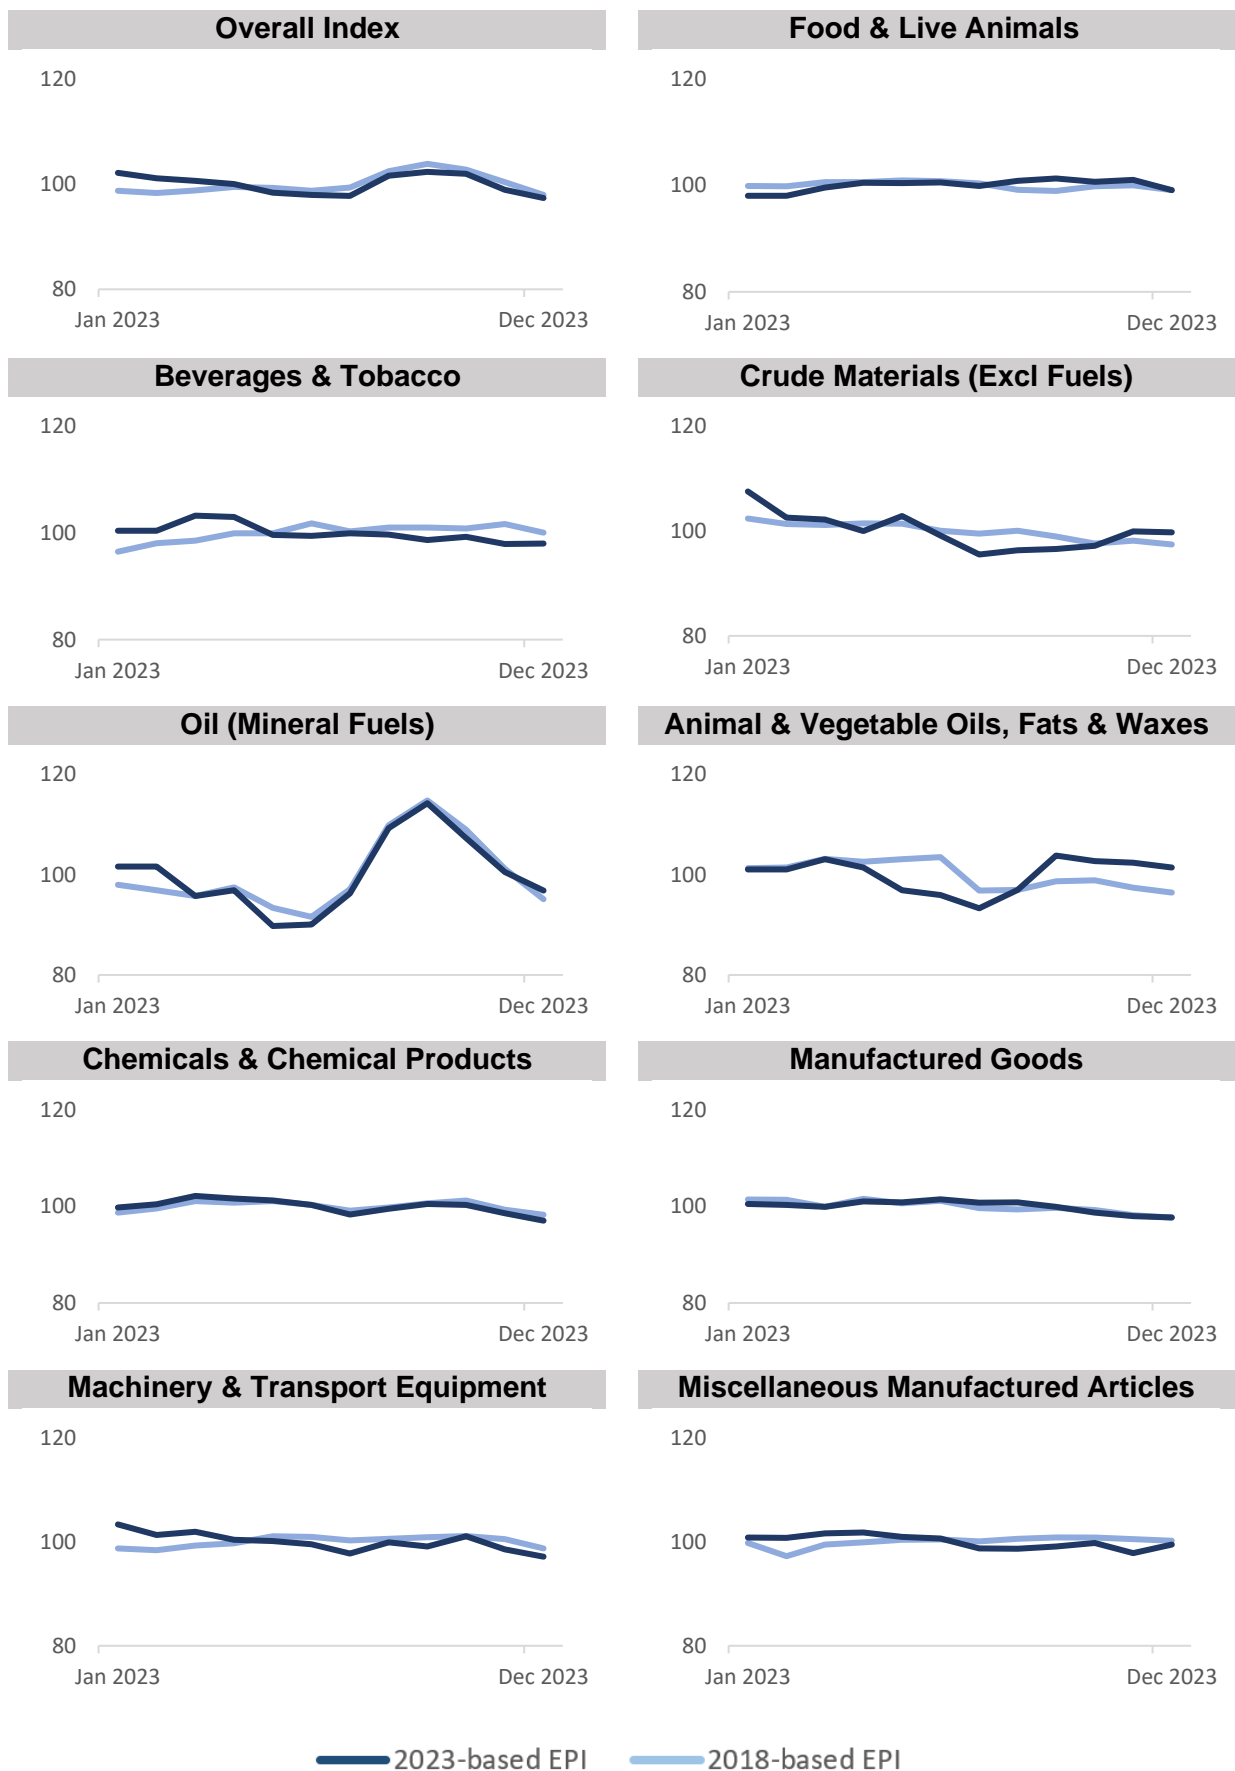

Figure 8 compares the price trends of the 2023-based and 2018-based EPIs by commodity section from January to December of 2023, which is the overlapping period between the two series. The overall EPI price trends of the two base years were similar. At the section level, the price trends for the new and old based index series were generally comparable except the Crude Materials, Beverages & Tobacco and the Animal & Vegetable Oils, Fats & Waxes sections. This was due to large changes in the composition and product mix in their baskets. Despite the differences, there was no notable impact on the overall EPI due to their relatively small weights.

**Figure 8: 2023-based and 2018-based EPI from January to December 2023**

## **V DISSEMINATION OF DATA**

A monthly report on the IPI and EPI is released on the SingStat Website ([www.singstat.gov.sg/publications/economy/import-export-price-indices](http://www.singstat.gov.sg/publications/economy/import-export-price-indices)) on the last working day or before the 29th day after the reference month. Data on the indices are available on the SingStat Table Builder ([www.singstat.gov.sg/tablebuilder](http://www.singstat.gov.sg/tablebuilder)).

SINGAPORE DEPARTMENT OF STATISTICS  
FEBRUARY 2024

# **APPENDIX**

## APPENDIX I:

### Index Computation Method

- I. The 2023-based IPI and EPI are fixed-weight Laspeyres price indices where the price and weight reference periods are aligned to base year 2023.
- II. The price indices are built up progressively from the commodity brand to the item, group, division, section and overall levels. The price relative at the commodity brand level provides the basic level for the compilation of higher level (or more aggregated) indices.
- III. The geometric means of these basic price relatives are obtained to form indices at the commodity item level. The weighted average of the price indices at the commodity item level is then used to form price indices at the group level. The process is repeated to obtain higher level indices including the division, section and overall price indices. The Laspeyres formula used for index computation is presented below:

**Price Index at Commodity Brand Level:**  $I_{it} = P_{it}/P_{i0} \times 100$

Where,  $I_{it}$  = price relative of i-th commodity brand in period t relative to base period

$P_{it}$  = price of i-th commodity brand in period t

$P_{i0}$  = price of i-th commodity brand in the base period

**Price Index at Commodity Item Level:**  $I_{jt} = \prod(I_{it})^{1/N}$

Where,  $I_{jt}$  = the price relative of the j-th commodity item in period t

$N$  = the number of commodity brands within the j-th commodity item

**Price Index at Commodity Group Level:**  $I_{kt} = \sum W_j \times I_{jt}$

Where,  $I_{kt}$  = the price relative of the k-th commodity group in period t

$W_j$  = the relative weight of the j-th commodity item

$\sum W_j = 1$

**Price Index at Commodity Division Level:**  $I_{mt} = \sum W_k \times I_{kt}$

Where,  $I_{mt}$  = price relative of the m-th commodity division in period t

$W_k$  = the relative weight of the k-th commodity group

$\sum W_k = 1$

**Price Index at Commodity Section Level:**  $I_{rt} = \sum W_m \times I_{mt}$

Where,  $I_{rt}$  = price relative of the r-th commodity section in period t

$W_m$  = the relative weight of the m-th commodity division

$\sum W_m = 1$

**Price Index at Overall Level:**  $I_t = \sum W_r \times I_{rt}$

Where,  $I_t$  = price index in period t

$W_r$  = the relative weight of the r-th commodity section

$\sum W_r = 1$

## APPENDIX II:

### Number of Indices at Commodity Division, Group and Item Level (2023=100)

Commodity Section	Commodity Division	Commodity Group	Commodity Item
<b>Import Price Index</b>	58	170	546
<b>Oil <sup>6</sup></b>	2	3	9
<b>Non-oil</b>	56	167	537

# SINGAPORE DEPARTMENT OF STATISTICS COMMUNICATIONS & INFORMATION SERVICES

Singapore Department of Statistics (DOS) offers official statistics, data insights, visualisations and statistical resources through user-friendly platforms.

## SingStat Website

Visit this convenient gateway to access latest data and statistical information.

**Data** across the six major themes of Economy, Industry, Trade & Investment, Population, Households and Society, covering some 200 topics such as Gross Domestic Product, Consumer Price Index, Retail Sales and Food & Beverage Services Indices, Producer Price Indices, Business Expectations, Business Receipts Index, Trade in Services, Direct Investment, Population Indicators, Household Income, Household Expenditure, Deaths and Life Expectancy, Births and Fertility, Marriages and Divorces, and more.

## Publications

- Information Papers which highlight conceptual and methodological changes and improvements in official statistics.
- Occasional Papers which present statistical trends and observations on important social and economic issues to stimulate discussion and research.
- eBook of Statistics which consolidates latest information and resources on key economic and socio-demographic domains.
- Singapore in Figures which allows exploration of key economic and socio-demographic statistics through interactive dashboards.
- Statistics Singapore Newsletter which features articles on latest key statistical activities, recent survey findings and methodological improvements.

**Visualisations** such as infographics and interactive dashboards with latest data, and videos to explain data and statistical concepts.

**Data for Businesses** with data tools to empower data-driven business decisions, giving firms insights on their customers, industries and business performance.

**Advance Release Calendar** providing dates of upcoming data releases in the next six months.
