# Import Price Index (2018 = 100) December 2021

### Month-on-Month Change

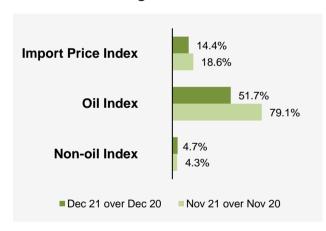

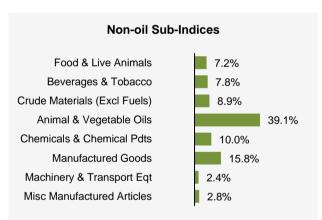

The Import Price Index fell 1.8% in December 2021, extending the 0.4% decrease in November 2021. The Oil index dropped 7.2%, following the 3.8% decrease in the previous month. The Non-oil index increased 0.4% in December 2021, after the 1.1% gain in November 2021.

Among the Non-oil sub-indices, the increases were led by the Miscellaneous Manufactured Articles (0.7%) and the Machinery & Transport Equipment (0.3%) indices. The increases were partially moderated by declines in the Chemicals & Chemical Products (-0.2%) and the Beverages & Tobacco (-0.1%) indices.

#### Year-on-Year Change

The Import Price Index rose 14.4% in December 2021 from a year ago, extending the 18.6% gain in November 2021. The Oil and Non-oil indices increased 51.7% and 4.7% respectively.

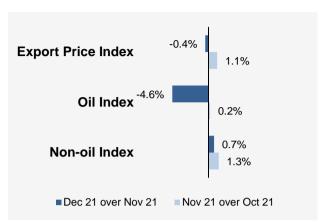

All Non-oil sub-indices rose. Higher prices were registered for Animal & Vegetable Oils (39.1%), Manufactured Goods (15.8%), Chemicals & Chemical Products (10.0%), Crude Materials (8.9%), Beverages & Tobacco (7.8%), Food & Live Animals (7.2%), Miscellaneous Manufactured Articles (2.8%) and Machinery & Transport Equipment (2.4%).

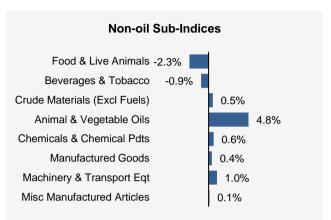

#### **Annual Change**

The Import Price Index rose 11.6% in 2021 over 2020, following the 7.0% decline in 2020. Higher prices of Oil (58.5%), Animal & Vegetable Oils (45.1%), Manufactured Goods (10.1%), Beverages & Tobacco (8.7%), Chemicals & Chemical Products (6.3%), Crude Materials (2.9%), Food & Live Animals (2.4%) and Miscellaneous Manufactured Articles (0.4%) were partially offset by lower price of Machinery & Transport Equipment (-1.4%).

# Export Price Index (2018 = 100) December 2021

# Month-on-Month Change

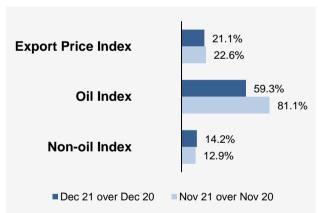

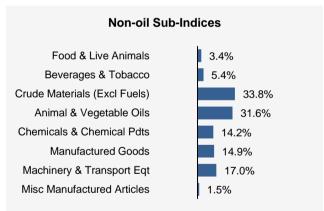

The Export Price Index decreased 0.4% in December 2021, in contrast to the 1.1% rise in November 2021. The Oil index fell 4.6%, reversing the 0.2% increase in the previous month. The Non-oil index grew by 0.7% in December 2021, following the 1.3% gain in November 2021.

Among the Non-oil sub-indices, increases were led by the Machinery & Transport Equipment (1.0%) index, due mainly to higher prices of integrated circuits, and the Chemicals & Chemical Products (0.6%) index. The increases were partially moderated by declines in the Food & Live Animals (-2.3%) index, due mainly to lower prices of miscellaneous food preparations, and the Beverages & Tobacco (-0.9%) index.

#### Year-on-Year Change

The Export Price Index increased 21.1% in December 2021 from a year ago, following the 22.6% rise in November 2021. The Oil and Non-oil indices went up 59.3% and 14.2% respectively.

All Non-oil sub-indices rose. Higher prices were registered for Crude Materials (33.8%), Animal & Vegetable Oils (31.6%), Machinery & Transport Equipment (17.0%), Manufactured Goods (14.9%), Chemicals & Chemical Products (14.2%), Beverages & Tobacco (5.4%), Food & Live Animals (3.4%) and Miscellaneous Manufactured Articles (1.5%).

#### **Annual Change**

The Export Price Index rose 11.3% in 2021 over 2020, after the 7.0% decline in 2020. Higher prices of Oil (54.3%), Crude Materials (22.1%), Animal & Vegetable Oils (17.2%), Manufactured Goods (12.8%), Chemicals & Chemical Products (10.1%), Machinery & Transport Equipment (3.8%), Beverages & Tobacco (1.9%) and Food & Live Animals (0.4%) were partially offset by lower price of Miscellaneous Manufactured Articles (-3.3%).

#### **Technical Note**

The **Import Price Index (IPI)** is used primarily as an indicator to track the price trends of imported goods into Singapore. Prices of imports, valued at cif (cost, insurance and freight) are obtained monthly from major importers. The weighting pattern of the index is derived from import statistics for 2018.

The **Export Price Index (EPI)** measures changes in the price of all exports of merchandise from Singapore, including re-exports. In general, prices are obtained from major exporters of the selected commodities. Prices used in the index computation, are the prices of goods that physically leave Singapore's main ports of export; also termed as free on board prices. The weights of the index are derived from the distribution of export by commodity in 2018.

#### **Index Formula**

The 2018-based series is compiled using the Laspeyres formula where the price and weight reference periods are aligned to the year 2018. The geometric mean formula has been adopted in the computation of unweighted elementary aggregate price indices. The arithmetic mean formula is applied in compiling indices at higher levels of aggregation where weights of specific sub-indices are available.

#### **Measurement of Changes in Price Indices**

Change over previous month compares the index of the month with that of the preceding month. Such comparisons measure the change in the price index between two consecutive months. They serve as useful short-term indicators of the price movements.

Change over same period of previous year measures change in the index over a twelve-month period. Such comparisons compare the movement in the price index between similar months in two consecutive years.

#### Linking the Old 2012-Based Price Index Series to the New 2018-Based Price Index Series

The IPI and EPI have been rebased from base year 2012 to base year 2018. To facilitate comparison of the historical price indices across base years, the old 2012-based series are linked to the new 2018-based series by re-scaling them via a Linked Coefficient. The Linked Coefficient is the ratio of the annual 2018-based index in 2018 to the annual 2012-based index in 2018.

Example: Linking the old Iron & Steel Index series for IPI prior to 2018, to the 2018-based Iron & Steel Index (2018=100)

#### 1) Calculate the linked coefficient

Year	Iron & Steel Index (2012=100)	Iron & Steel Index (2018=100)	Linked Coefficient		
2018	93.4	100.0	100.0 ÷ 93.4 = <b>1.071</b>		

#### 2) Re-scaling the old series to the 2018-based series using the Linked Coefficient

Year	Month	Iron & Steel Index (2012=100)	Iron & Steel Index (2018=100)
2016	Dec	84.0	84.0 x <b>1.071</b> = <b>90.0</b>
2017	Jan	85.6	85.6 x <b>1.071</b> = <b>91.7</b>

#### Linking Method for Maintaining the Old Index Reference Period

To continue the old 2012-based index series going forward in time, re-scale the new 2018-based index series to the old base year 2012 level, via a Linked Coefficient. The Linked Coefficient is the ratio of the annual 2012-based index in 2018 to the annual 2018-based index in 2018.

Example: Linking the new 2018-based Iron & Steel Index series for IPI to the 2012-based Iron & Steel Index (2012=100)

#### 1) Calculate the linked coefficient

Year	Iron & Steel Index (2018=100)	Iron & Steel Index (2012=100)	Linked Coefficient		
2018	100.0	93.4	93.4 ÷ 100.0 <b>=0.934</b>		

2) Re-scaling the new series to the 2012-based series using the Linked Coefficient

Year	Month	Iron & Steel Index (2018=100)	Iron & Steel Index (2012=100)		
2019	Jan	98.6	98.6 x <b>0.934</b> = <b>92.1</b>		
2019	Feb	102.4	102.4 x <b>0.934</b> = <b>95.6</b>		

#### **Index Revision**

The indices may be revised when late returns and amendments received from respondents are incorporated.

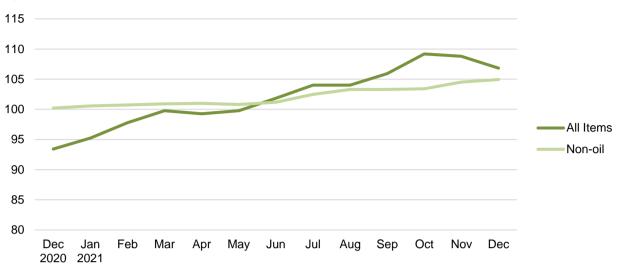

#### **Dissemination of Data**

The Import and Export Price Indices are available on the SingStat Website (<a href="www.singstat.gov.sg/tablebuilder">www.singstat.gov.sg/tablebuilder</a>). Excel tables for this month's report are available at <a href="https://www.singstat.gov.sg/publications/economy/import-export-price-indices">https://www.singstat.gov.sg/publications/economy/import-export-price-indices</a> or through the QR code below:

nes not elsewhere specified

- nil or negligible

# **NOTES**

The Import and Export Price Indices report contains statistics that are the most recent available at the time of its preparation.

Some statistics, particularly those for the most recent time periods, are provisional and may be subject to revision in later issues.
