# Import Price Index (2018 = 100) June 2022

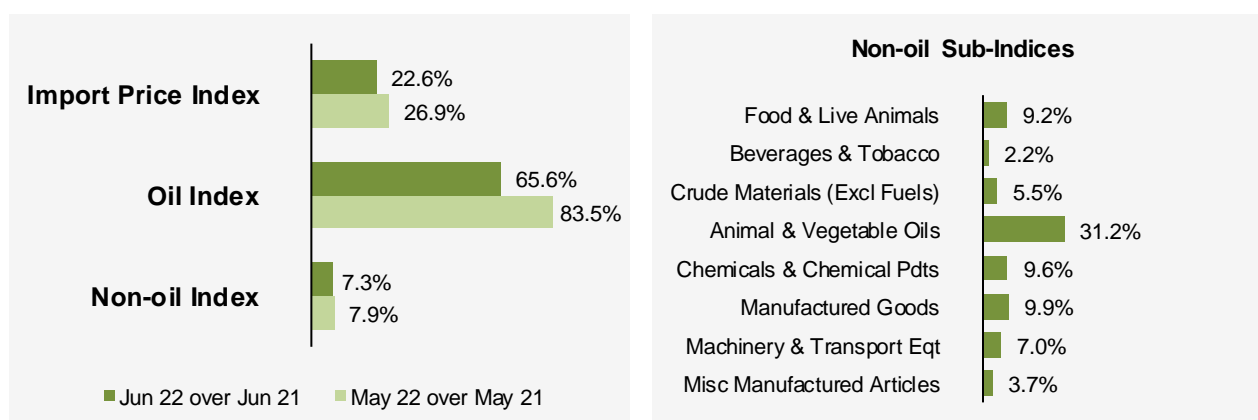

## Month-on-Month Change

The Import Price Index fell 1.3% in June 2022, in contrast to the 1.8% increase in May 2022. The Oil index decreased 3.3%, reversing the 3.2% increase in the previous month. The Non-oil index declined 0.2% in June 2022, after the 1.0% rise in May 2022.

Among the Non-oil sub-indices, decreases were led by the Miscellaneous Manufactured Articles (-0.4%), Manufactured Goods (-0.4%) and the Machinery & Transport Equipment (-0.2%) indices. The decreases were slightly moderated by increases in the Food & Live Animals (0.2%) and the Chemicals & Chemical Products (0.1%) indices.

## Year-on-Year Change

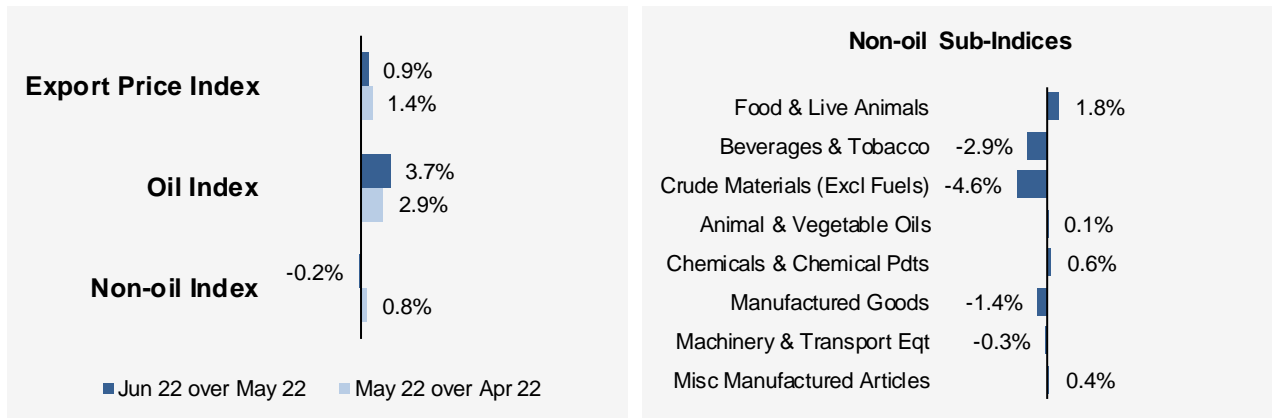

The Import Price Index rose 22.6% in June 2022 from a year ago, following the 26.9% increase in May 2022. The Oil and Non-oil indices went up 65.6% and 7.3% respectively.

All Non-oil sub-indices increased. Higher prices were registered for Animal & Vegetable Oils (31.2%), Manufactured Goods (9.9%), Chemicals & Chemical Products (9.6%), Food & Live Animals (9.2%), Machinery & Transport Equipment (7.0%), Crude Materials (5.5%), Miscellaneous Manufactured Articles (3.7%) and Beverages & Tobacco (2.2%).

## Export Price Index (2018 = 100) June 2022

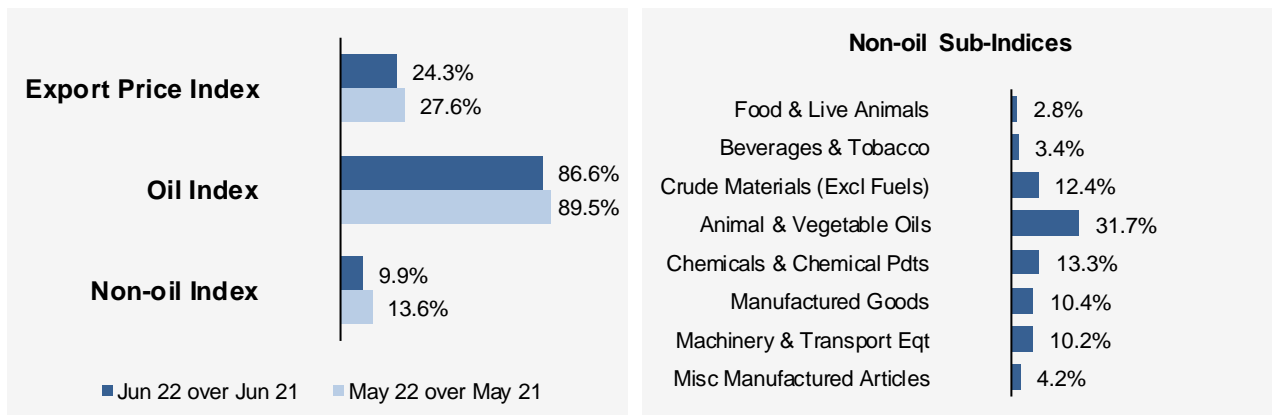

### Month-on-Month Change

The Export Price Index increased 0.9% in June 2022, following the 1.4% rise in May 2022. The Oil index rose 3.7%, after the 2.9% gain in the previous month. The Non-oil index fell 0.2% in June 2022, in contrast to the 0.8% increase in May 2022.

Among the Non-oil sub-indices, decreases were led by the Manufactured Goods (-1.4%) index, mainly on account of lower prices of non-ferrous metals, and the Machinery & Transport Equipment (-0.3%) index. The decreases were partially offset by increases in the Food & Live Animals (1.8%) index, due primarily to higher prices of miscellaneous food preparations, and the Chemicals & Chemical Products (0.6%) index.

### Year-on-Year Change

The Export Price Index increased 24.3% in June 2022 from a year ago, extending the 27.6% gain in May 2022. The Oil and Non-oil indices rose 86.6% and 9.9% respectively.

All Non-oil sub-indices increased. Higher prices were registered for Animal & Vegetable Oils (31.7%), Chemicals & Chemical Products (13.3%), Crude Materials (12.4%), Manufactured Goods (10.4%), Machinery & Transport Equipment (10.2%), Miscellaneous Manufactured Articles (4.2%), Beverages & Tobacco (3.4%) and Food & Live Animals (2.8%).

## Technical Note

The **Import Price Index (IPI)** is used primarily as an indicator to track the price trends of imported goods into Singapore. Prices of imports, valued at CIF terms (cost, insurance and freight) are obtained monthly from major importers. The weighting pattern of the index is derived from import statistics for 2018.

The **Export Price Index (EPI)** measures changes in the price of all exports of merchandise from Singapore, including re-exports. In general, prices are obtained from major exporters of the selected commodities. Prices used in the index computation, are the prices of goods that physically leave Singapore's main ports of export; also termed as Free on Board (FOB) prices. The weights of the index are derived from the distribution of export by commodity in 2018.

### Index Formula

The 2018-based series is compiled using the Laspeyres formula where the price and weight reference periods are aligned to the year 2018. The geometric mean formula has been adopted in the computation of unweighted elementary aggregate price indices. The arithmetic mean formula is applied in compiling indices at higher levels of aggregation where weights of specific sub-indices are available.

### Measurement of Changes in Price Indices

*Change over previous month* compares the index of the month with that of the preceding month. Such comparisons measure the change in the price index between two consecutive months. They serve as useful short-term indicators of the price movements.

*Change over same period of previous year* measures change in the index over a twelve-month period. Such comparisons compare the movement in the price index between similar months in two consecutive years.

### Linking the Old 2012-Based Price Index Series to the New 2018-Based Price Index Series

The IPI and EPI have been rebased from base year 2012 to base year 2018. To facilitate comparison of the historical price indices across base years, the old 2012-based series are linked to the new 2018-based series by re-scaling them via a Linked Coefficient. The Linked Coefficient is the ratio of the annual 2018-based index in 2018 to the annual 2012-based index in 2018.

Example: Linking the old Iron & Steel Index series for IPI prior to 2018, to the 2018-based Iron & Steel Index (2018=100)

#### 1) Calculate the linked coefficient

| Year | Iron & Steel Index<br>(2012=100) | Iron & Steel Index<br>(2018=100) | Linked Coefficient        |
|------|----------------------------------|----------------------------------|---------------------------|
| 2018 | 93.4                             | 100.0                            | $100.0 \div 93.4 = 1.071$ |

#### 2) Re-scaling the old series to the 2018-based series using the Linked Coefficient

| Year | Month | Iron & Steel Index<br>(2012=100) | Iron & Steel Index<br>(2018=100) |
|------|-------|----------------------------------|----------------------------------|
| 2016 | Dec   | 84.0                             | $84.0 \times 1.071 = 90.0$       |
| 2017 | Jan   | 85.6                             | $85.6 \times 1.071 = 91.7$       |

### Linking Method for Maintaining the Old Index Reference Period

To continue the old 2012-based index series going forward in time, re-scale the new 2018-based index series to the old base year 2012 level, via a Linked Coefficient. The Linked Coefficient is the ratio of the annual 2012-based index in 2018 to the annual 2018-based index in 2018.

Example: Linking the new 2018-based Iron & Steel Index series for IPI to the 2012-based Iron & Steel Index (2012=100)

#### 1) Calculate the linked coefficient

| Year | Iron & Steel Index<br>(2018=100) | Iron & Steel Index<br>(2012=100) | Linked Coefficient        |
|------|----------------------------------|----------------------------------|---------------------------|
| 2018 | 100.0                            | 93.4                             | $93.4 \div 100.0 = 0.934$ |

#### 2) Re-scaling the new series to the 2012-based series using the Linked Coefficient

| Year | Month | Iron & Steel Index<br>(2018=100) | Iron & Steel Index<br>(2012=100) |
|------|-------|----------------------------------|----------------------------------|
| 2019 | Jan   | 98.6                             | $98.6 \times 0.934 = 92.1$       |
| 2019 | Feb   | 102.4                            | $102.4 \times 0.934 = 95.6$      |

### Index Revision

The indices may be revised when late returns and amendments received from respondents are incorporated.

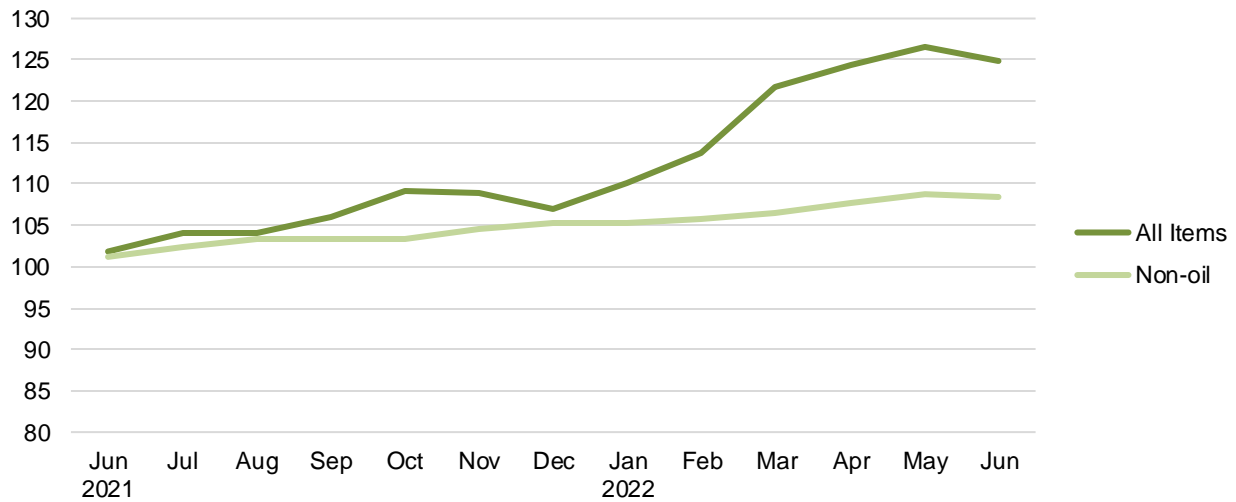

### Dissemination of Data

The Import and Export Price Indices are available on the SingStat Website ([www.singstat.gov.sg/tablebuilder](http://www.singstat.gov.sg/tablebuilder)). Excel tables for this month's report are available at <https://www.singstat.gov.sg/publications/economy/import-export-price-indices> or through the QR code below:
