Singapore Manufactured Products Price Index (2023 = 100) February 2025

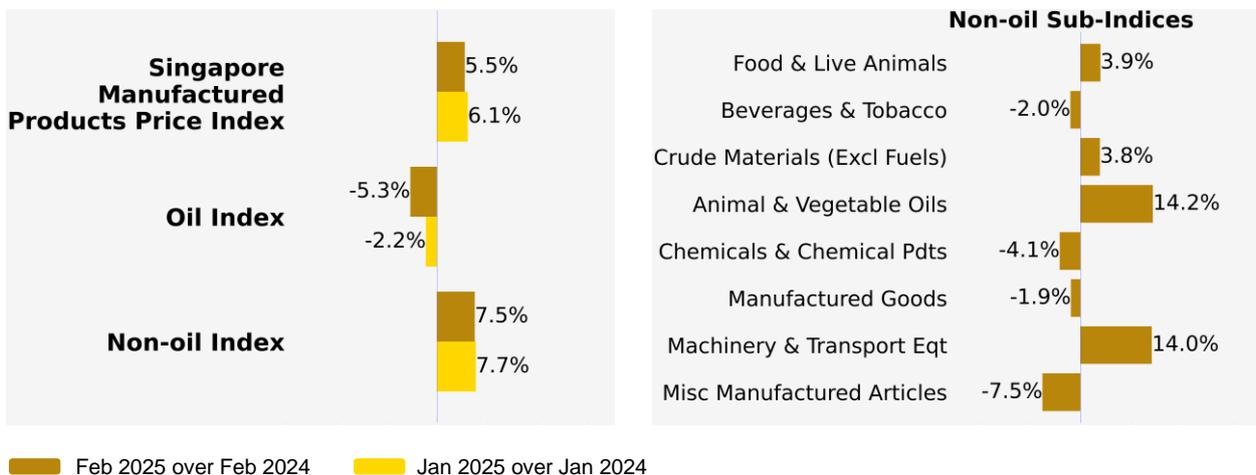

Month-on-Month Change

The Singapore Manufactured Products Price Index fell 0.5% in February 2025, in contrast to the 3.6% increase in January 2025. The Oil index decreased 2.6%, reversing the 6.0% increase in the previous month. The Non-oil index fell 0.2% in February 2025, as opposed to the 3.2% increase in January 2025.

The decrease in the Non-oil index was due to the Machinery & Transport Equipment index, as well as the Miscellaneous Manufactured Articles, Crude Materials and Manufactured Goods indices. The decreases were partially offset by increases in the Chemicals & Chemical Products, Food & Live Animals and Animal & Vegetable Oils indices.

Year-on-Year Change

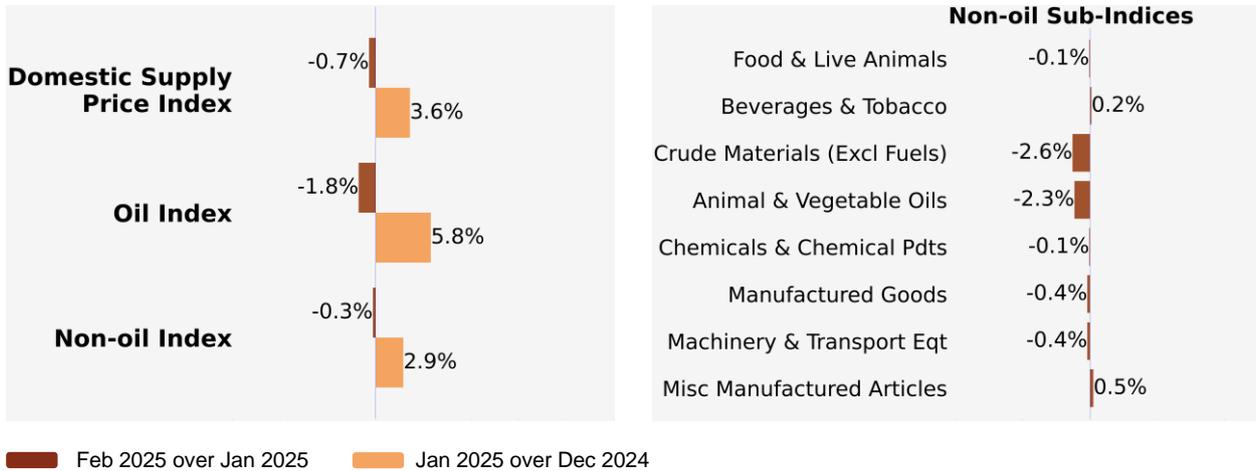

The Singapore Manufactured Products Price Index rose 5.5% in February 2025 from a year ago, extending the 6.1% increase in January 2025. The Oil index dipped 5.3% while the Non-oil index gained 7.5%.

Among the Non-oil sub-indices, the increase in the Non-oil index was due to the Machinery & Transport Equipment index, attributed to higher prices of electrical machinery apparatus, as well as the Food & Live Animals, Crude Materials and Animal & Vegetable Oils indices. The increases were partially moderated by declines in the Chemicals & Chemical Products, Miscellaneous Manufactured Articles, Manufactured Goods and Beverages & Tobacco indices.

Domestic Supply Price Index (2023 = 100) February 2025

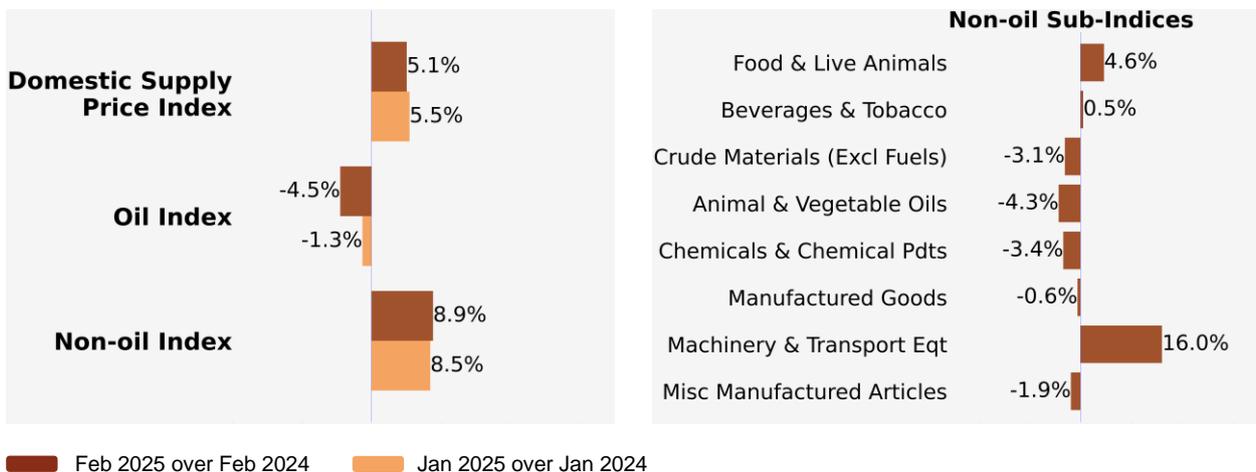

Month-on-Month Change

The Domestic Supply Price Index fell 0.7% in February 2025, in contrast to the 3.6% increase in January 2025. The Oil index decreased 1.8%, against the 5.8% increase in the previous month. The Non-oil index fell 0.3% in February 2025, reversing the 2.9% increase in January 2025.

Among the Non-oil sub-indices, the decrease in the Non-oil index was due to the Machinery & Transport Equipment index, as well as the Crude Materials, Manufactured Goods, Animal & Vegetable Oils, Chemicals & Chemical Products and Food & Live Animals indices. The decreases were partially offset by increases in the Miscellaneous Manufactured Articles and Beverages & Tobacco indices.

Year-on-Year Change

The Domestic Supply Price Index rose 5.1% in February 2025 from a year ago, continuing the 5.5% increase in January 2025. The Oil index decreased 4.5% while the Non-oil index increased 8.9%.

The increase in the Non-oil index was due to the Machinery & Transport Equipment index, led by higher prices of electrical machinery apparatus, as well as the Food & Live Animals and Beverages & Tobacco indices. The increases were partially moderated by declines in the Chemicals & Chemical Products, Miscellaneous Manufactured Articles, Animal & Vegetable Oils, Manufactured Goods and Crude Materials indices.

Technical Note

The **Singapore Manufactured Products Price Index (SMPPPI)** monitors price changes of locally manufactured commodities. The weights of the index are derived from the distribution of local production by commodity in 2023. Ex-factory prices are obtained from principal manufacturers of the items concerned.

The **Domestic Supply Price Index (DSPI)** is designed to measure the changes in the price level of either goods manufactured locally or imported, which are retained for use in the domestic economy by the government, business or household sectors. For imported products, the prices refer to those paid by importers in bringing the goods into Singapore, commonly referred to as c.i.f. prices. In the case of Singapore manufactured products, the quotations used are ex-factory prices. The weight for each commodity item is proportional to the value of its total supply or availability in the domestic market in 2023.

Index Formula

The 2023-based series is compiled using the 'modified Laspeyres' formula where the weight reference period of 2022 preceded the price reference period of 2023. The geometric mean formula has been adopted in the computation of unweighted elementary aggregate price indices. The arithmetic mean formula is applied in compiling indices at higher levels of aggregation where weights of specific sub-indices are available.

Measurement of Changes in Price Indices

Change over previous month compares the index of the month with that of the preceding month. Such comparisons measure the change in the price index between two consecutive months. They serve as useful short-term indicators of the price movements.

Change over same period of previous year measures change in the index over a twelve-month period. Such comparisons compare the movement in the price index between similar months in two consecutive years.

Linking the Old 2018-Based Price Index Series to the New 2023-Based Price Index Series

The SMPPPI and DSPI have been rebased from base year 2018 to base year 2023. To facilitate comparison of the historical price indices across base years, the old 2018-based series are linked to the new 2023-based series by re-scaling them via a Linked Coefficient. The Linked Coefficient is the ratio of the annual 2023-based index in 2023 to the annual 2018-based index in 2023.

Example: Linking the old Iron & Steel Index series for SMPPPI prior to 2023, to the 2023-based Iron & Steel Index (2023=100)

1) Calculate the linked coefficient

Year	Iron & Steel Index (2018=100)	Iron & Steel Index (2023=100)	Linked Coefficient
2023	135.6	100.0	$100.0 \div 135.6 = 0.737$

2) Re-scaling the old series to the 2023-based series using the Linked Coefficient

Year	Month	Iron & Steel Index (2018=100)	Iron & Steel Index (2023=100)
2021	Dec	125.6	$125.6 \times 0.737 = 92.6$
2022	Jan	127.2	$127.2 \times 0.737 = 93.7$

Rescaling the 2023-Based Index Series to Previous Years

To continue the old 2018-based index series going forward in time, re-scale the new 2023-based index series to the old base year 2018 level, via a Rescaling Coefficient. The Rescaling Coefficient is the ratio of the annual 2023-based index in 2023 to the annual 2023-based index in 2018.

Example: Rescaling the new 2023-based Iron & Steel Index series for SMPPI to the 2018-based Iron & Steel Index (2018=100)

1) Calculate the rescaling coefficient

Year	Annual Iron & Steel Index in 2023	Annual Iron & Steel Index in 2018	Rescaling Coefficient
2023	100.0	73.7	$100.0 \div 73.7 = 1.357$

2) Re-scaling the new series to the 2018-based series using the Rescaling Coefficient

Year	Month	Iron & Steel Index (2023=100)	Iron & Steel Index (2018=100)
2024	Jan	100.0	$100.0 \times 1.357 = 135.7$
2024	Feb	100.6	$100.6 \times 1.357 = 136.5$

Index Revision

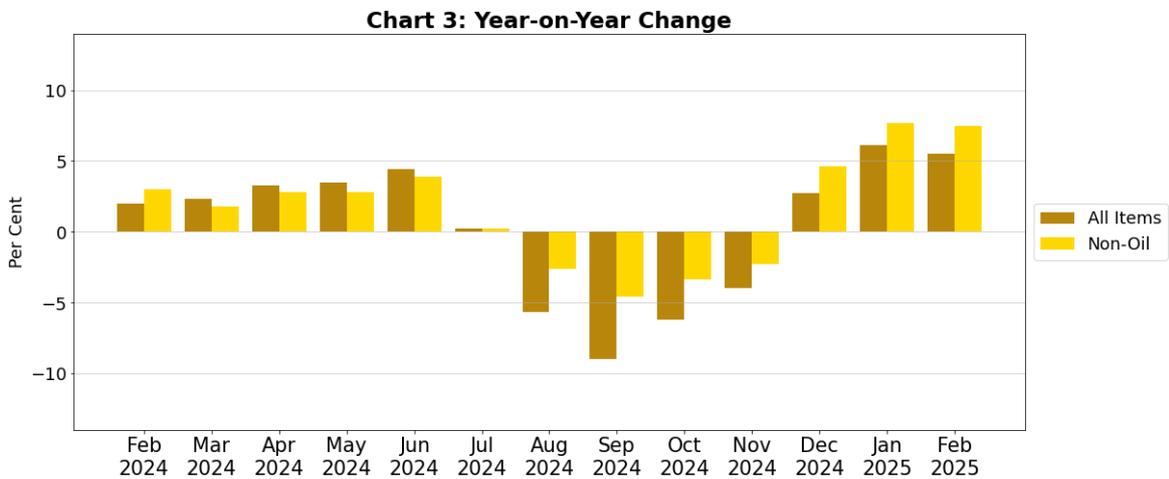

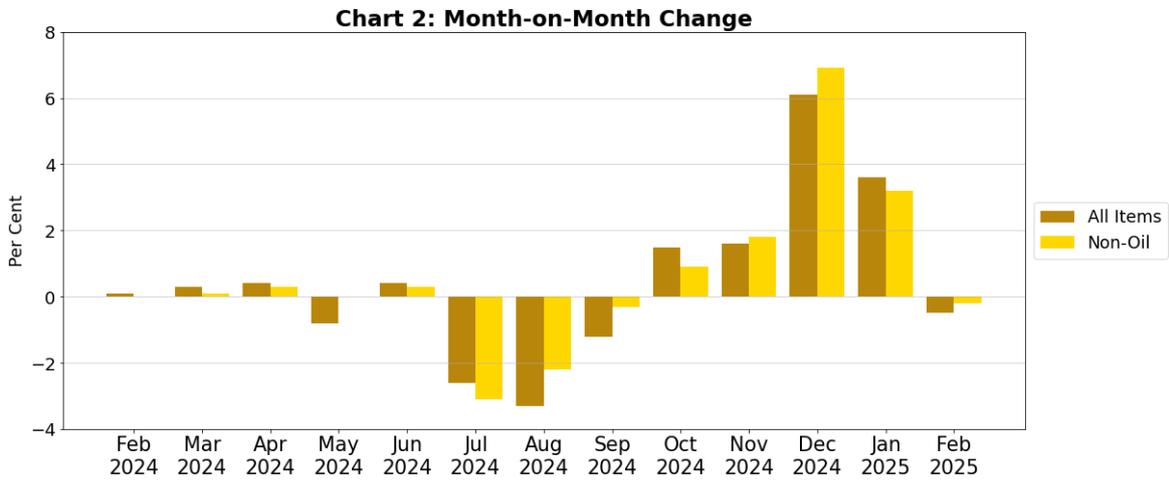

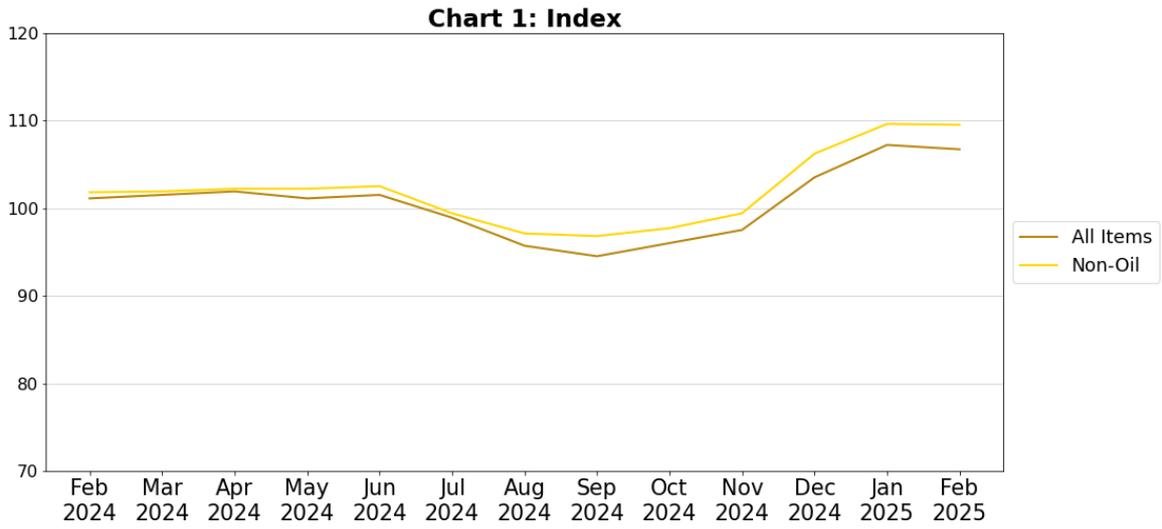

The indices may be revised when late returns and amendments received from respondents are incorporated.

Dissemination of Data

The Singapore Manufactured Products and Domestic Supply Price Indices are available on the SingStat Website (www.singstat.gov.sg/tablebuilder). Excel tables for this month's report are available at <https://www.singstat.gov.sg/publications/economy/producer-price-indices> or through the QR code below:
