Statistical activities conducted by the Singapore Department of Statistics are governed by the provisions of the Statistics Act (Cap. 317). The Act guarantees the confidentiality of information collected from individuals and companies. It spells out the legislative authority and responsibility of the Chief Statistician. The Act is available in the Department's Website (www.singstat.gov.sg).

PREFACE

The General Household Survey (GHS) 2015 is the third in the series of mid-decade national survey. It covers a wide range of topics and provides comprehensive data on Singapore's population and households in between the population censuses that are conducted once in ten years.

Since 2000, the Singapore of Department of Statistics (DOS) has adopted the register-based approach for the population censuses and GHS. Basic population count and characteristics were compiled using administrative records. Additional data not available from administrative sources were collected from a sample survey.

The sample survey for the GHS 2015 was conducted as part of the 2015 Comprehensive Household Survey (CHS), which also incorporated the Comprehensive Labour Force Survey conducted annually by the Ministry of Manpower (MOM). The field operation of CHS 2015 was undertaken by MOM.

This report provides the key trends in the basic demographic characteristics, education, language, religion, transport as well as household and housing characteristics of the resident population and households. Detailed statistical tables are included to facilitate in-depth studies by interested users. Basic data on population count and profile from the register-based GHS were first released in the Population Trends 2015 report published in September 2015.

I would like to thank all who have in one way or another contributed to the successful completion of the GHS 2015. I am grateful for the support given by MOM and contributions from various government ministries and statutory boards which provided pertinent information for the GHS 2015. My appreciation is also extended to all participating households for their co-operation in the GHS 2015.

Wong Wee Kim
Chief Statistician
Singapore

March 2016

Our Vision

A National Statistical System of Quality, Integrity and Expertise.

Our Mission

We Provide Reliable, Relevant and Timely Statistics to Support Singapore's Social and Economic Development.

Our Guiding Principles

Professionalism & Expertise *We adhere to professional ethics and proficiently produce quality statistics that comply with international concepts and best practices.*

Relevance *We constantly innovate our processes and produce statistics that meet users' needs.*

Accessibility *We make our statistics readily available.*

Confidentiality *We protect the confidentiality of information provided to us.*

Timeliness & Reliability *We produce statistics that users can depend on and disseminate them at the earliest possible date while maintaining data quality.*

Cost Effectiveness *We use resources effectively, minimising respondent burden and leveraging on administrative data.*

EXECUTIVE SUMMARY

Singapore's resident population was 3.90 million as at end-June 2015¹. Additional characteristics of the resident population and households, which were collected from a sample survey, are now available in the General Household Survey 2015 report. The key findings are as follows:

The Proportion of Singles Among the Younger Age Groups Increased

The proportion of singles among younger age groups has increased. Between 2010 and 2015, the proportion of singles among residents aged 25-29 years rose from 74.6 per cent to 80.2 per cent for males, and from 54.0 per cent to 63.0 per cent for females. The proportion of singles among those aged 30 years and above remained stable.

Majority of Ever-Married Females Still Having Two or More Children, although the Average Number of Children has Declined

Two-thirds of resident ever-married females aged 40-49² years had two or more children. The proportion who was childless or had one child increased slightly. Among resident ever-married females aged 40-49 years, the average number of children born declined from 2.02 in 2010 to 1.85 in 2015.

The Education Profile of Residents Improved

The education profile of the resident population improved between 2010 and 2015. Among the resident non-student population aged 25 years and over, 52.0 per cent possessed post-secondary qualifications in 2015, up from 46.5 per cent in 2010.

Multi-Language Literacy Rose

The literacy rate among the resident population was high, at close to 97.0 per cent in 2015. The proportion of residents literate in two or more languages increased. Among literate residents aged 15 and over, 73.2 per cent were able to read in two or more languages in 2015, an increase from the 70.5 per cent in 2010.

¹ This data comes from the register-based General Household Survey and was previously released in the Population Trends 2015 report published in September 2015.

² Females in this age group were more likely to have completed child-bearing.

Use of English as the Main Language at Home Rose

English was the most frequently spoken language at home for 36.9 per cent of residents in 2015, up from 32.3 per cent in 2010.

More Residents Had No Religious Affiliation

The resident population remained diverse in terms of religious affiliation. Among residents aged 15 years and over in 2015, 43.2 per cent identified themselves as Buddhists or Taoists, 18.8 per cent as Christians, 14.0 per cent as Muslims and 5.0 per cent as Hindus. Another 18.5 per cent of residents had no religious affiliation in 2015, an increase from the 17.0 per cent in 2010.

More Resident Households Lived in Condominiums and Other Apartments

HDB 4-room flat remained the most common house type in 2015, with 32.0 per cent of resident households living in them. The next most common house type was HDB 5-room and executive flats, with 24.1 per cent of resident households living in such flats, followed by HDB 3-room flats with 18.2 per cent. The proportion of resident households living in condominiums and other apartments increased from 11.5 per cent in 2010 to 13.9 per cent in 2015.

Most households owned the houses they lived in. Home ownership among resident households stood at 90.8 per cent in 2015, up from 87.2 per cent in 2010.

More Households Had At Least One Member aged 65 years and over

With an ageing population, the proportion of resident households with at least one member aged 65 years and over rose from 24.1 per cent in 2010 to 29.1 per cent in 2015. Among residents aged 65 years and over in resident households, 61.3 per cent lived with their children in 2015, down from 66.7 per cent in 2010.

More Residents Relied on Public Bus and the MRT to Travel to Work or School

In 2015, more than half of Singapore's resident working persons commuted to work by public bus or the MRT. In particular, the proportion commuting to work by MRT with a transfer to/from public bus increased from 17.6 per cent in 2010 to 24.8 per cent in 2015. Conversely, those who used cars as the only mode of transport to work decreased from 24.8 per cent to 21.9 per cent over the same 5-year period.

The shift towards the use of MRT with a transfer to/from public bus was also observed among resident students attending higher education institutions. Reflecting the close proximity of the schools to their homes, 44.7 per cent of pre-primary and primary school students did not need to take any transport to school in 2015, although this was lower than the 46.2 per cent in 2010.

⁴ 'Post-Secondary Qualification' includes post-secondary (non-tertiary), diploma and professional or university qualification.

⁵ Includes non-privatised Housing and Urban Development Corporation (HUDC) flats.

⁶ Includes HDB studio apartments.

Introduction

INTRODUCTION

The General Household Survey (GHS) provides comprehensive data on Singapore's population and households in between the population censuses which are conducted once in ten years. It covers a wide range of topics to provide information on the profile of population and households in Singapore. 2015 marks the third in the series of mid-decade GHS, which was first conducted in 1995.

Concept and Coverage

Similar to the Census of Population 2010, the GHS 2015 adopted the de jure concept for Singapore's population estimates based on a person's place of usual residence. Under the de jure concept of "usual residence", Singapore residents (citizens and permanent residents) with valid local addresses and who were not away from Singapore for a continuous period of 12 months or longer were included in the total population count. Non-residents comprising foreigners who were working, studying or living in Singapore but not granted permanent residence were also included in the total population. The transient population, such as tourists and short-term visitors, was excluded.

Register-Based Approach

In the previous GHS 2005, the Singapore Department of Statistics (DOS) adopted a register-based approach, supplemented with a large-scale sample survey covering some 90,000 dwelling units.

For GHS 2015, DOS continued to adopt the register-based approach where basic population statistics were compiled using administrative records from multiple sources. The merged administrative records provide the basic population count and characteristics such as age, sex, ethnic group, type of dwelling and geographic distribution in Singapore. Basic data on population count and profile from the register-based GHS were first released in the Population Trends 2015 report published in September 2015.

Sample Survey

Additional information not available from administrative sources were collected from a sample survey. These included marital status and fertility, religion, education and literacy, home language, mode of transport, elderly profile, as well as housing and household characteristics.

The sample survey for the GHS 2015 was conducted as part of the 2015 Comprehensive Household Survey (CHS), which also incorporated the Comprehensive Labour Force Survey (CLFS) conducted annually by the Ministry of Manpower (MOM). This approach of having one CHS to provide information for the GHS and the CLFS reduced the overall response burden and cost of having separate sample surveys for the GHS and the CLFS.

The field operation of CHS 2015 was carried out by MOM from May to July 2015. Of the 33,000 housing units selected in the initial sample, 1,196 households were excluded from the survey as they were unoccupied, non-residential or demolished. A total of 27,804 households responded to the survey, achieving an overall response rate of 87.4 per cent.

Key Findings

Marriage and Fertility

Among Residents Aged 15 Years and Over,
Marital Status

...by Sex, 2015

Majority continue to have 2 or more children, although the average number of children born has declined.

Among Ever-Married Resident Females Aged 40 – 49 Years,
 who were more likely to have completed child bearing

CHAPTER 1

MARRIAGE AND FERTILITY

Singapore's resident population was 3.90 million, comprising 3.38 million Singapore Citizens and 0.53 million Permanent Residents, as at end-June 2015¹.

Marital Status

Marriage remains an important institution in Singapore. The majority of Singapore residents are married. Among residents aged 15 years and over, 59.4 per cent were married in 2015, unchanged from 2010 (Table 1.1). The proportion of singles declined from 32.2 per cent to 31.6 per cent, while the proportion of those who were widowed rose from 5.1 per cent to 5.3 per cent over the same period. The proportion who were either divorced or separated remained relatively low at 3.8 per cent in 2015, although it was up from 3.3 per cent in 2010.

With longer life expectancy for women, proportionately more females were widowed than males. The proportion of females who were divorced or separated was also higher than their male counterparts.

Table 1.1 Marital Status of Resident Population Aged 15 Years and Over by Sex

Marital Status	Per Cent					
	Total		Males		Females	
	2010	2015	2010	2015	2010	2015
Total	100.0	100.0	100.0	100.0	100.0	100.0
Single	32.2	31.6	34.7	33.5	29.8	29.7
Married	59.4	59.4	61.2	61.9	57.7	57.0
Widowed	5.1	5.3	1.6	1.8	8.4	8.5
Divorced/Separated	3.3	3.8	2.4	2.7	4.2	4.8

¹ With 1.63 million non-residents, the total population was 5.54 million. Data on population count are from the register-based General Household Survey and previously released in the Population Trends 2015 report published in September 2015. Key findings in the following sections/chapters were from a sample survey, which collected additional information not available from administrative sources.

Increase in Proportion of Singles Among Younger Age Groups

Reflecting the trend of later marriages, the increase in proportion of singles was more prominent for the younger age groups. Among residents aged 20-24 years, 98.8 per cent of males and 95.6 per cent of females were single in 2015 (Chart 1.1). Between 2010 and 2015, the proportion of singles among residents aged 25-29 years rose from 74.6 per cent to 80.2 per cent for the males, and from 54.0 per cent to 63.0 per cent for the females. The proportion of singles among those aged 30 years and above remained relatively unchanged between 2010 and 2015.

Chart 1.1 Proportion of Singles Among Resident Population by Age Group and Sex

Proportion of Singles by Ethnic Group

The Chinese had the highest proportion of singles. In 2015, 15.9 per cent of Chinese resident males aged 40-49 years were single, higher than that for the Malays (13.8 per cent) and the Indians (5.6 per cent) (Chart 1.2). The proportion of singles among Chinese resident females aged 40-49 years in 2015 was 16.9 per cent, compared to 8.1 per cent for both the Malays and the Indians.

Chart 1.2 Proportion of Singles Among Resident Population by Selected Age Group, Sex and Ethnic Group

Proportion of Singles by Educational Attainment

Singlehood was generally more prevalent among resident males with lower educational qualifications than those with higher qualifications. Conversely, singlehood was more prevalent among resident females with higher educational qualifications than those with lower qualifications. In 2015, 22.5 per cent of resident males aged 40-49 years with below secondary qualifications were single, which was twice the proportion for university graduates (Table 1.2). Among resident female university graduates aged 40-49 years, 19.6 per cent were single, higher than the 10.1 per cent for those with below secondary qualifications.

**Table 1.2 Proportion of Singles Among Resident Population
by Selected Age Group, Sex and Highest Qualification Attained**

Highest Qualification Attained	Per Cent			
	30-39 Years		40-49 Years	
	2010	2015	2010	2015
Males				
Below Secondary	32.7	34.2	20.4	22.5
Secondary	30.5	33.2	14.6	16.2
Post-Secondary (Non-Tertiary)	30.1	29.3	14.2	15.2
Diploma & Professional Qualification	29.1	30.5	11.1	11.8
University	25.8	26.1	9.7	11.2
Females				
Below Secondary	10.6	12.3	9.0	10.1
Secondary	15.1	13.1	11.8	11.1
Post-Secondary (Non-Tertiary)	19.4	17.6	14.4	15.4
Diploma & Professional Qualification	23.7	22.0	17.6	15.8
University	24.6	24.1	18.8	19.6

Note: Data pertain to residents who are not attending educational institutions as full-time students. The data include those who are upgrading their qualifications through part-time courses while working.

Number of Children Born

Although the proportion of the resident population who were married had remained relatively unchanged over the last five years, those who were married were having fewer children on average. The average number of children born to resident ever-married females aged 15 years and over declined slightly from 2.24 in 2010 to 2.14 in 2015 (Chart 1.3).

**Chart 1.3 Average Number of Children Born
to Resident Ever-Married Females Aged 15 Years and Over**

The majority of ever-married women have two or more children. In 2015, 66.1 per cent of those aged 40-49 years had given birth to two or more children (Chart 1.4).

However, the proportion of ever-married women who were childless or only had one child increased slightly. Among those aged 40-49 years, the proportion who were childless increased from 9.3 per cent in 2010 to 11.6 per cent in 2015.

Chart 1.4 Resident Ever-Married Females by Age Group and Number of Children Born

Average Number of Children Born by Age Group

The average number of children born to resident ever-married females declined across all the age groups. For those aged 40-49 years (who were more likely to have completed child-bearing), the average number of children born declined from 2.02 in 2010 to 1.85 in 2015 (Chart 1.5). The decline was smaller for those aged 30-39 years and 15-29 years.

Chart 1.5 Average Number of Children Born by Age Group of Resident Ever-Married Females

Average Number of Children Born by Ethnic Group

The Malays had more children than the Chinese and the Indians on average. Among resident ever-married females aged 40-49 years, the Malays had an average of 2.64 children in 2015, higher than the Indians (1.94) and the Chinese (1.73) (Chart 1.6). Between 2010 and 2015, the Malays also experienced a smaller decline in the average number of children born as compared to the Chinese and the Indians.

Chart 1.6 Average Number of Children Born to Resident Ever-Married Females Aged 40-49 Years by Ethnic Group

Average Number of Children Born by Educational Attainment

In line with the trend of higher educated females marrying later than those with lower qualifications, higher educated females also had fewer children on average than those with lower qualifications. Among the resident ever-married females aged 40-49 years, university graduates had an average of 1.70 children in 2015, which was lower than the average of 2.12 children among those with below secondary qualifications (Chart 1.7).

Chart 1.7 Average Number of Children Born to Resident Ever-Married Females Aged 40-49 Years by Highest Qualification Attained

Note: Data pertain to residents who are not attending educational institutions as full-time students. The data include those who are upgrading their qualifications through part-time courses while working.

Education Profile

Among Residents¹ Aged 25 Years and Over

In 2015,

52.0% attained

Post-Secondary Qualifications

(i.e. post-secondary (non-tertiary), diploma and professional or university qualification),

an increase from 46.5% in 2010.

Educational **improvements** were observed **across all age groups**, with the proportion of residents with **Post-Secondary Qualifications higher** among the **younger** age groups.

¹ Data pertain to residents who are not attending educational institutions as full-time students. The data include those who are upgrading their qualifications through part-time courses while working.

CHAPTER 2

EDUCATION

Younger Male and Female Residents were More Highly Educated

With increased schooling opportunities over the years, the proportion of residents with higher qualifications was higher among the younger age cohorts than the older age cohorts (Chart 2.1). In 2015, more than 80 per cent of Singapore resident non-students aged 25-29 years and 30-34 years had post-secondary qualifications (i.e. post-secondary (non-tertiary), diploma and professional qualification or university qualification). In comparison, the majority of those in the older groups aged 60-64 years, and 65 years and over did not attain post-secondary qualifications.

Education opportunities for the females had vastly improved over the years. While a lower proportion of females in the older age groups had a post-secondary qualification as compared to their male counterparts, there was very little difference for the younger cohorts.

Chart 2.1 Resident Population Aged 25 Years and Over by Highest Qualification Attained, Age Group and Sex

Note: Data pertain to residents who are not attending educational institutions as full-time students. The data include those who are upgrading their qualifications through part-time courses while working. For example, some males aged 25-29 years could be still attending university as full-time students and are excluded.

Rise in Proportion of Residents with Post-Secondary Education

The education profile of the overall resident population also improved between 2010 and 2015, with an increase in the proportion of resident non-students with post-secondary qualifications (Chart 2.2).

Among the resident non-student population aged 25 years and over, 52.0 per cent possessed post-secondary qualifications in 2015, up from 46.5 per cent in 2010.

**Chart 2.2 Resident Population Aged 25 Years and Over
by Highest Qualification Attained**

Note: Data pertain to residents who are not attending educational institutions as full-time students. The data include those who are upgrading their qualifications through part-time courses while working.

Educational Improvements Across All Age Groups

The increase in the proportion of resident non-students with post-secondary qualifications between 2010 and 2015 was observed among all age groups. Among resident non-students aged 25-34 years, the proportion with post-secondary qualifications increased from 81.5 per cent to 86.0 per cent (Table 2.1).

Similarly, the proportion of resident non-students with post-secondary qualifications among those aged 35-44 years and 45-54 years rose to 75.8 per cent and 49.7 per cent respectively in 2015, from 64.3 per cent and 35.7 per cent in 2010.

The proportion with post-secondary qualifications among the older age group of 55 years and over also increased from 17.2 per cent in 2010 to 22.2 per cent in 2015.

**Table 2.1 Resident Population Aged 25 Years and Over
by Age Group and Highest Qualification Attained**

Highest Qualification Attained	Per Cent							
	25-34 Years		35-44 Years		45-54 Years		55 Years & Over

Note: Data pertain to residents who are not attending educational institutions as full-time students. The data include those who are upgrading their qualifications through part-time courses while working.

Higher Proportion of Post-Secondary Educated Across Ethnic Groups

The Chinese, Malay and Indian communities saw an improvement in their education profiles. Between 2010 and 2015, the proportion with post-secondary qualifications rose across all the three major ethnic groups (Table 2.2).

**Table 2.2 Resident Population Aged 25 Years and Over

Note: Data pertain to residents who are not attending educational institutions as full-time students. The data include those who are upgrading their qualifications through part-time courses while working.

Literacy

Among Residents Aged 15 Years and Over

Multi-language literacy had become **more prevalent.**

Among those literate,
more could read in two or more languages.

Language Spoken at Home

Among Residents Aged 5 Years and Over

Use of **English** as the main language spoken at home **rose.**

Note: Data exclude persons who were unable to speak, and those in one-person households and households comprising only unrelated persons.

CHAPTER 3

LITERACY AND HOME LANGUAGE

Rise in Multi-Language Literacy

The literacy rate among the resident population was high at close to 97 per cent in 2015. Multi-language literacy had become more prevalent. The proportion of the literate resident population that was literate in two or more languages increased from 70.5 per cent in 2010 to 73.2 per cent in 2015 (Table 3.1). In 2015, nearly nine in ten Malays who were literate were able to read in two or more languages, while 82.9 per cent of Indians could do likewise. Compared to the Malays and Indians, a lower proportion of Chinese residents were literate in two or more languages, at 70.3 per cent. Nonetheless, this was an increase from the 66.5 per cent in 2010.

Table 3.1 Literate Resident Population Aged 15 Years and Over by Ethnic Group and Number of Language(s) Literate In

	Total		Chinese		Malays		Indians	
	2010	2015	2010	2015	2010	2015	2010	2015
General Literacy Rate (%)	95.9	96.8	95.2	96.5	97.1	97.3	98.1	98.3
<u>Among Literate Residents</u>								
% Literate in One Language Only	29.5	26.8	33.5	29.7	13.7	11.4	17.9	17.1
% Literate in Two or More Languages	70.5	73.2	66.5	70.3	86.3	88.6	82.1	82.9

The majority of the Chinese were literate in English and Chinese only, and most Malays were literate in English and Malay only (Chart 3.1). Language literacy was more diverse among the Indians. Some 45.7 per cent of Indians were literate in English and Tamil only, while another 14.0 per cent were literate in English and Malay only.

Chart 3.1 Literate Resident Population Aged 15 Years and Over by Ethnic Group and Language Literate In

¹ Refer to other languages not elsewhere listed under respective Ethnic Group. For example, "Others" under Chinese include Malay, Tamil etc. and "Others" under Malays include Tamil etc.

Language Spoken at Home

The use of English as the main language spoken at home among the resident population had risen (Chart 3.2). English was the most frequently spoken language at home for 36.9 per cent of the resident population in 2015, up from 32.3 per cent in 2010.

Chart 3.2 Resident Population Aged 5 Years and Over by Language Most Frequently Spoken at Home

The use of English as the language most frequently spoken at home had increased across the major ethnic groups (Chart 3.3).

Among the Indians, English was the most commonly used language at home. In 2015, 44.3 per cent of Indians spoke English most frequently at home, while 37.7 per cent used mainly Tamil at home.

Among the Chinese and Malays, Mandarin and Malay continued to be more commonly used at home than English respectively.

Among the Chinese, 46.1 per cent spoke Mandarin most frequently at home in 2015, while 37.4 per cent used English as the main language at home. Some 16.1 per cent of Chinese spoke Chinese dialects most frequently at home. The proportion who spoke Mandarin or Chinese dialects most frequently at home declined between 2010 and 2015.

Among the Malays, 78.4 per cent spoke Malay most frequently at home in 2015, while 21.5 per cent used English as the main language at home. The proportion who spoke Malay most frequently at home also declined between 2010 and 2015.

**Chart 3.3 Resident Population Aged 5 Years and Over
By Ethnic Group and Language Most Frequently Spoken at Home**

¹ Refer to other languages not elsewhere listed under respective Ethnic Group. For example, "Others" under Chinese include Malay, Tamil etc. and "Others" under Malays include Mandarin, Chinese Dialects, Tamil etc.

Use of English at Home by Age Group

The use of English at home was generally more prevalent among the younger age groups than the older ones across the major ethnic groups

English was the most frequently spoken language at home for at least half of the younger Chinese resident population aged below 25 years in 2015 (Table 3.2). In comparison, a lower proportion of those aged 25 years and over used English as their main spoken language, at between 24.1 and 37.5 per cent. Among Chinese residents aged 25-54 years, a majority (50.6 – 56.2 per cent) spoke Mandarin most frequently at home in 2015.

Malay continued to be the most frequently spoken language at home for the majority of Malays (63.3 – 93.2 per cent) across all age groups, although the proportion declined between 2010 and 2015. The use of English among the Malays increased across all age groups in 2015, with the increase being the most significant among the younger Malay population aged 5-14 years.

The use of English as the main spoken language at home also increased among Indian residents aged below 35 years, and those aged 55 years and over.

**Table 3.2 Resident Population Aged 5 Years and Over
by Age Group and Language Most Frequently Spoken at Home**

Use of English As Home Language by Educational Attainment of Residents

The use of English at home was generally more prevalent among residents with higher qualifications. Among Singapore residents with university degrees, English was the most frequently spoken language at home for 52.2 per cent of the Chinese, 42.6 per cent of the Malays, and 42.2 per cent of the Indians in 2015 (Chart 3.4). In comparison, for those with below secondary qualification, less than 10 per cent of Chinese and Malays, and 23.2 per cent of Indians spoke English most frequently at home.

Chart 3.4 Proportion of Resident Population Aged 15 Years and Over who Spoke English Most Frequently at Home by Ethnic Group and Highest Qualification Attained

Note: Data pertain to residents who are not attending educational institutions as full-time students. The data include those who are upgrading their qualifications through part-time courses while working.

Religion

Among Residents Aged 15 Years and Over

The resident population in Singapore remained **diverse** in terms of religious affiliation.

Over the last 5 years, religious composition remained relatively **stable**.

No Religious Affiliation by Age Group in 2015

Higher proportions of younger residents reported **no religious affiliation** compared to older residents.

Age Group (Years)

CHAPTER 4

RELIGION

The resident population in Singapore remained diverse in terms of religious affiliation. Among Singapore residents aged 15 years and over in 2015, 43.2 per cent identified themselves as Buddhists or Taoists, 18.8 per cent as Christians, 14.0 per cent as Muslims and 5.0 per cent as Hindus (Chart 4.1). Between 2010 and 2015, the share of Christianity increased marginally while the shares of other major religious groups declined slightly. Nonetheless, the religious composition of the resident population remained relatively stable over the last five years.

The proportion of residents without religious affiliation rose between 2010 and 2015. Among Singapore residents aged 15 years and above, the proportion without religious affiliation increased from 17.0 per cent in 2010 to 18.5 per cent in 2015.

Chart 4.1 Resident Population Aged 15 Years and Over by Religion

Religious Affiliation by Ethnic Group

Among the Chinese, Buddhists and Taoists constituted the majority, at 55.2 per cent, in 2015 (Chart 4.2). However, this was a decline from the 57.4 per cent in 2010. Over the same 5-year period, there was an increase in the proportion of persons with no religious affiliation (from 21.8 per cent to 23.3 per cent), and a slight increase in the proportion of Christians (from 20.1 per cent to 20.9 per cent).

Compared to the Malays and Indians, the Chinese had a much higher proportion with no religious affiliation. The proportion of Malays and Indians with no religious affiliation was 0.3 per cent and 1.4 per cent respectively in 2015 (Charts 4.3 and 4.4).

Chart 4.2 Chinese Resident Population Aged 15 Years and Over by Religion

There were no significant changes in the religious affiliation of the Malays. In 2015, 99.2 per cent of Malays were Muslims.

Chart 4.3 Malay Resident Population Aged 15 Years and Over by Religion

The religious affiliation of the Indians was more diverse than the Chinese and the Malays. Hinduism was the religion for 59.9 per cent of Indians in 2015, followed by Islam with 21.3 per cent, and Christianity with 12.1 per cent. Another 5.4 per cent of Indians were affiliated to other religions such as Sikhism. Between 2010 and 2015, there was a slight increase in the proportion of Hindus while the proportions of Christians and Muslims declined marginally.

Chart 4.4 Indian Resident Population Aged 15 Years and Over by Religion

Religious Affiliation and Age Group

Higher proportions of younger residents reported no religious affiliation compared to older residents. In 2015, 23.0 per cent of residents aged 15-24 years had no religious affiliation (Table 4.1). This was higher than the 14.6 per cent of residents aged 55 years and over with no religious affiliation. Between 2010 and 2015, the proportion of residents with no religious affiliation increased across all age groups.

Reflecting the younger age structure of the Malays, there were proportionately more Muslims among the younger residents than older residents. In 2015, 19.8 per cent of residents aged 15-24 years were Muslims, compared to 11.6 per cent of residents aged 55 years and over.

In contrast, a larger proportion of the older residents were Buddhists or Taoists compared to those in the younger age groups. While Buddhists and Taoists accounted for 51.5 per cent of residents aged 55 years and over in 2015, they accounted for a lower 33.3 per cent among residents aged 15-24 years.

Table 4.1 Resident Population Aged 15 Years and Over by Religion and Age Group

Religious Affiliation and Educational Attainment

The proportion of residents with no religious affiliation was higher among the higher educated residents than the lower educated residents. Among university graduates, 25.8 per cent had no religious affiliation in 2015, which was higher than the 10.6 per cent among residents with below secondary qualifications (Table 4.2).

Similarly, the proportions of Christians and Hindus were higher among the higher educated than the lower educated. Among university graduates, 30.0 per cent were Christians and 8.0 per cent were Hindus in 2015. The corresponding proportions among residents with below secondary qualifications were 9.0 per cent and 3.1 per cent respectively.

On the other hand, the proportion of residents who identified themselves as Buddhists or Taoists was lower among the higher educated residents. Among residents with university qualifications, 30.7 per cent identified themselves as Buddhists or Taoists in 2015, which was lower than the 61.1 per cent for residents with below secondary qualifications.

Households and Housing

Among Resident Households

Nearly **1 in 3 households** lived in a **HDB 4-room flat**, making it the most common house type in 2015.

¹ Includes non-privatised Housing and Urban Development Corporation (HUDC) flats.

² Includes HDB studio apartments.

Home Ownership

remained high at

87.2% **90.8%**

Average Household Size

declined from 3.5 in 2010 to

3.4

Proportion of resident households with at least 1 member aged

65 years and over

rose.

CHAPTER 5

HOUSEHOLDS AND HOUSING

Housing Type

The number of resident households was 1.23 million in 2015, an increase from 1.15 million in 2010.

Nearly one in three resident households (or 32.0 per cent) was living in a HDB 4-room flat, making it the most common house type for resident households in 2015. HDB 5-room and executive flats were the next most common flat type at 24.1 per cent, followed by HDB 3-room flats at 18.2 per cent.

The proportion of resident households living in condominiums and other apartments was 13.9 per cent in 2015, up from 11.5 per cent in 2010 (Table 5.1). The proportion of resident households living in landed properties and HDB 1- and 2-room flats remained relatively small at 5.6 per cent each in 2015.

Home Ownership Rose

Home ownership among resident households stood at 90.8 per cent in 2015, up from 87.2 per cent in 2010 (Table 5.2). Home ownership was the highest among Chinese households at 93.1 per cent, followed by Malay (86.9 per cent) and Indian (84.1 per cent) households.

Table 5.2 Resident Households by Tenancy and Ethnic Group of Head

Tenancy	Per Cent							
	Total		Chinese		Malays		Indians	
	2010	2015	2010	2015	2010	2015	2010	2015

Owner	87.2	90.8	89.9	93.1	89.6	86.9	77.3	84.1
Non-Owner	12.8	9.2	10.1	6.9	10.4	13.1	22.7	15.9

Smaller Household Size

Between 2010 and 2015, the average resident household size shrank from 3.5 persons to 3.4 persons on the back of a decline in the proportion of households with 5 or more persons (Chart 5.1). The share of 4-person households remained at 23.0 per cent, while the proportion of households with 2 or 3 persons increased. The share of one-person households was relatively unchanged at around 12.0 per cent.

Chart 5.1 Resident Households by Household Size and Ethnic Group of Head

The shift towards smaller households between 2010 and 2015 was the most notable among Malay households. Nonetheless, Malay households continued to have larger households on average than Chinese and Indian households. The average household size for Malay households dropped from 4.2 in 2010 to 3.9 in 2015. Over the same 5-year period, the average household size for Chinese households dipped from 3.4 to 3.3, while that for Indian households remained unchanged at 3.6 persons.

Household Size by Type of Dwelling

Apart for households in HDB 1- and 2-room flats, average household size of households in other dwelling types declined between 2010 and 2015 (Chart 5.2).

For households in HDB 1- and 2-room flats, the average household size increased slightly from 2.1 in 2010 to 2.2 in 2015. Nonetheless, the average household size remained smaller than those for other types of dwelling.

For larger flat types, the average household size in 2015 ranged from 2.7 persons among HDB 3-room flat dwellers to 3.9 persons among those living in HDB 5-room and executive flats. For households living in private housing, the average household size was 3.3 persons among those residing in condominiums and other apartments, and 4.3 persons among those residing in landed properties.

Chart 5.2 Average Household Size by Type of Dwelling

¹ Includes HDB studio apartments.

Households by Household Living Arrangement

Households with one family nucleus¹ or multi-family nuclei accounted for 83.1 per cent of resident households in 2015, relatively unchanged from 2010 (Chart 5.3). Households headed by married couples formed the majority of households with a family nucleus.

Households headed by married couples with children living with them accounted for 54.3 per cent of all resident households in 2015, a decline from 56.0 per cent in 2010. By contrast, the proportion of households headed by married couples without children living with them increased from 13.7 per cent to 15.3 per cent over the same 5-year period. This reflected changes in age structure as well as marriage and family formation preferences of the resident population.

Compared to the Chinese and the Indians, the Malays have the highest proportion of households with family nucleus. Among the Malay households, 89.2 per cent were households with family nucleus in 2015, as compared to 82.0 per cent among Chinese households and 86.2 per cent among Indian households.

¹ For statistical purposes, a family nucleus in a household can be formed by (a) a married couple without children, (b) a married couple with never-married child(ren), or (c) one parent with never-married child(ren). Households with no family nucleus include households formed by a person living alone or living with others but does not constitute any family nucleus.

 ■ Couple-Based without Children
 ■ Couple-Based with Children
 ■ Non-Couple-Based Households

Households with Members Aged 65 Years and Over

With the ageing of the population, the proportion of households with at least one member aged 65 years and over increased from 24.1 per cent in 2010 to 29.1 per cent in 2015 (Chart 5.4). Over the same 5-year period, the proportion of households constituting solely members aged 65 years and over also rose from 4.6 per cent to 6.7 per cent.

Chart 5.4 Resident Households with Members Aged 65 Years and Over

Living Arrangements of Residents Aged 65 Years and Over

The proportion of residents aged 65 years and over in resident households who were co-residing with their spouses and/or children remained high, at 84.6 per cent, in 2015 (Chart 5.5). However, the proportion living with their children dropped from 66.7 per cent in 2010 to 61.3 per cent in 2015. Over the same 5-year period, the proportion living with their spouse but without any children living with them rose from 19.4 per cent to 23.3 per cent, while the proportion living alone rose from 8.2 per cent to 8.9 per cent.

Given their longer life expectancy, females aged 65 years and over were more likely than males to be widowed. Therefore, they were more likely than males to live alone (11.2 per cent vis-à-vis 6.1 per cent), or to live with their children but without their spouse (37.6 per cent vis-à-vis 9.8 per cent).

Chart 5.5 Living Arrangements of Resident Population Aged 65 Years and Over in Resident Households by Sex

Compared to the Chinese and the Indians, Malay residents aged 65 years and over were more likely to live with their children and less likely to live alone. In 2015, the proportion of Malay residents aged 65 years and over living with their children was 69.8 per cent, which was higher than the 60.6 – 60.8 per cent among their Chinese and Indian counterparts (Chart 5.6). Conversely, only 5.4 per cent of the Malay residents aged 65 years and over lived alone in 2015, as compared to 9.2 – 9.9 per cent among their Chinese and Indian counterparts.

By Age Group of Husband,

CHAPTER 6

MARRIED COUPLES IN RESIDENT HOUSEHOLDS

Ethnic Group of Married Couples

The number of married couples increased from 880,800 in 2010 to 939,000 in 2015. A majority of the married couples were of the same ethnic group (Table 6.1). In 2015, 96.8 per cent of Chinese married males had a wife who was also Chinese. In comparison, 92.6 per cent of Malay married males had a wife who was also Malay, while 88.8 per cent of Indian married males had a wife who was also Indian.

**Table 6.1 Ethnic Group of Wife by Husband's Ethnic Group
Among Married Couples in Resident Households**

Per Cent

Higher Proportion of Dual-Career Couples

In 2015, the majority of married couples were dual-career couples (i.e., where both husband and wife worked). The proportion of dual-career couples increased from 47.1 per cent in 2010 to 53.8 per cent in 2015 (Chart 6.1).

With more females joining the workforce, the proportion of married couples where only the husband worked fell from 32.6 per cent in 2010 to 27.7 per cent in 2015. The proportion of couples where only the wife worked remained low at 6.0 per cent in 2015, although this was a marginal increase from the 5.8 per cent in 2010.

Chart 6.1 Married Couples in Resident Households by Working Status of Couple

The proportion of dual-career couples was higher among younger age groups than the older age groups (Table 6.2). Nonetheless, more married couples in the older age groups (aged 50 years and above) were staying on in the workforce. The proportion of non-working couples (i.e., where both husband and wife were not working) decreased between 2010 and 2015. In particular, among older couples where the husband was aged 50-64 years or 65 years and above, there was a 5.5 and 14.0 percentage-point decline respectively in the proportion of non-working couples from 2010 to 2015.

Table 6.2 Married Couples in Resident Households by Working Status of Couple and Age Group of Husband

Working Status of Couple	Age Group of Husband									
	Total		Below 35 Years		35 to 49 Years		50 to 64 Years		65 Years and Over	
	2010	2015	2010	2015	2010	2015	2010	2015	2010	2015

Both Husband and Wife Not Working	14.5	12.4	1.5	0.7	2.2	0.7	12.7	7.2	66.9	52.9

Income from Work of Married Couples

Excluding non-working couples, the proportion of married couples whose combined monthly income from work was below \$8,000 decreased between 2010 and 2015. Conversely, the proportion of those with combined monthly income from work of \$8,000 and above increased (Chart 6.2).

Chart 6.2 Married Couples in Resident Households by Monthly Income from Work of Couple

Note: Income from work of couple includes employer CPF contributions.
Data exclude couples where both husband and wife were not working.

The average and median income from work of married couples increased between 2010 and 2015 (Chart 6.3). The median monthly income from work of married couples where both husband and wife were working was \$9,716 in 2015, higher than that for couples where only the husband or the wife worked (\$5,000 and \$2,580 respectively).

Chart 6.3 Average and Median Monthly Income from Work of Married Couples in Resident Households by Working Status of Couple

Note: Income from work of couple includes employer CPF contributions.

Highest Qualification Attained of Married Couples

In 2015, 46.1 per cent of married couples comprised husbands with the same educational qualifications as their spouse, up from 44.3 per cent in 2010 (Chart 6.4). This was higher than the proportion of married couples where the wife had a lower qualification than the husband (32.7 per cent), or where the wife had a higher qualification than the husband (21.2 per cent).

Chart 6.4 Highest Qualification Attained of Wife as Compared to Husbands Among Married Couples

Note: Data exclude married couples where either the husband or wife or both were attending educational institutions as full-time students. The data include those who were upgrading their qualifications through part-time courses while working.

Among married males with university qualifications in 2015, the majority of them (67.7 per cent) had a spouse who was also a university graduate (Chart 6.5).

In comparison, the majority of married males with post-secondary (non-tertiary) qualification (57.4 per cent) had a spouse with lower educational qualification in 2015. A relatively high proportion of married males with diploma and professional qualifications also had a spouse of lower educational qualification, at 45.3 per cent.

Chart 6.5 Married Couples in Resident Households by Highest Qualification Attained of Husband and Wife

¹ Below Secondary includes no qualification, primary and lower secondary qualifications. Comparison of educational qualification between husband and wife for Chart 6.5 was done based on Below Secondary as a group.

Note: Data exclude married couples where either the husband or wife or both were attending educational institutions as full-time students. The data include those who are upgrading their qualifications through part-time courses while working.

Transport

For Resident Working Persons/Students Travelling to Work/School in 2015

Usual Modes among Working Persons Travelling to Work

Median Time Taken to Travel to Work

Usual Modes among Students Travelling to School

44.7% of Pre-Primary and Primary students did not require transport

39.3% of Secondary students used only the Public Bus

46.0% of Diploma and Professional Qualification students and **54.4%** of University students travelled by MRT with a transfer to/from Public Bus

CHAPTER 7

TRANSPORT

Usual Mode of Transport to Work

Public bus and MRT remained the most important modes of transport for residents commuting to work. In 2015, more than half of Singapore’s resident working persons used the public bus or the MRT to commute to work (Chart 7.1).

Chart 7.1 Proportion of Resident Working Persons Aged 15 Years and Over by Mode of Transport to Work

With the expansion of the MRT network in recent years, more commuters were using the MRT to travel to work. In particular, there was a significant increase in the proportion of residents commuting to work by MRT with a transfer to/from public bus, from 17.6 per cent in 2010 to 24.8 per cent in 2015.

With the increased usage of MRT, the proportion that used the public bus as the only mode of transport to work declined from 19.3 per cent in 2010 to 16.5 per cent in 2015. The proportion that used cars as the only mode of transport to work also decreased over the same 5-year period, from 24.8 per cent to 21.9 per cent.

Mode of Transport to Work by Housing Type

The majority of HDB dwellers relied on public bus or MRT to commute to work. In 2015, 72.5 per cent of residents staying in HDB 1- and 2- room flats used the public bus or MRT when travelling to work (Table 7.1). The corresponding proportions were 67.6 per cent for those living in HDB 3-room flats, 63.9 per cent for those in HDB 4-room flats, and 57.9 per cent for those in HDB 5-room or executive flats.

In comparison, more than half of the residents staying in landed properties (52.5 per cent) relied on cars as their only mode of transport to work in 2015. Among residents staying in condominiums and private flats, 44.7 per cent travelled to work by cars only.

¹ Includes HDB studio apartments.

Usual Mode of Transport to Work by Planning Area¹

In 2015, the proportion of resident working persons who commuted to work by MRT or public bus was the highest among those staying in Toa Payoh (65.5 per cent), followed by those living in Sembawang (64.9 per cent), Bukit Merah (64.4 per cent) and Queenstown (63.8 per cent) (Map 7.1).

By contrast, the proportion of resident working persons who commuted to work by car only was the highest among those staying in Tanglin (54.9 per cent), Bukit Timah (53.9 per cent) and Marine Parade (34.9 per cent) (Map 7.2).

¹ Planning areas refer to areas demarcated in the Urban Redevelopment Authority's Master Plan 2014.

Travelling Time to Work

In 2015, the median travelling time to work was 30 minutes for those who travelled by public bus only (Chart 7.2). Journeys to work by MRT were typically longer. The median travelling time was 45 minutes for those who travelled to work by MRT only, and 60 minutes for those who travelled by MRT with a transfer to/from public bus.

For those who travelled to work by car, private chartered bus/van, or motorcycle/scooter, the median travelling time to work was slightly shorter, at 30 minutes.

Between 2010 and 2015, the median travelling time to work remained relatively unchanged for those travelling by public bus, car, private chartered bus/van and motorcycle/scooter only. However, the median travelling time to work for those travelling by MRT only and those by MRT with a transfer to/from public bus increased. The Land Transport Authority's (LTA) Land Transport Master Plan 2013 report cited commuters travelling longer distances between their homes and workplaces as a reason for the increase in travelling time observed in the Household Interview Travel Survey (HITS) 2012².

Chart 7.2 Median Travelling Time to Work by Mode of Transport

² The HITS 2012 was conducted by LTA between June 2012 and May 2013.

Travelling Time to Work by Planning Area

Resident working persons staying near the central business district generally had shorter travelling time to work than those staying further away. In 2015, the median travelling time to work was 25 minutes among resident working persons staying in Tanglin, and 30 minutes for those staying in Bedok, Bishan, Bukit Merah, Bukit Timah, Clementi, Geylang, Kallang, Marine Parade, Novena, Outram, Queenstown, Serangoon and Toa Payoh (Map 7.3).

On the other hand, the median travelling time to work was longest at 45 minutes for resident working persons staying in Bukit Panjang, Choa Chu Kang, Punggol, Sembawang, Sengkang, Woodlands and Yishun.

Usual Mode of Transport to School

Reflecting the close proximity of the schools to their homes, 44.7 per cent of the pre-primary and primary school students did not need to take any transport to school in 2015, slightly lower than the 46.2 per cent in 2010 (Table 7.2). The proportion of pre-primary and primary school students who took the school bus to school dropped from 20.2 per cent in 2010 to 18.6 per cent in 2015. There was a corresponding increase in the proportion who travelled to school by car only, from 14.3 per cent in 2010 to 16.6 per cent in 2015.

Public bus and MRT were important modes of transport to school for those attending higher education institutions. Among university students, 54.4 per cent travelled to school by MRT with a transfer to/from public bus in 2015, up from 43.6 per cent in 2010. The proportion who took MRT only also rose from 10.9 per cent to 15.9 per cent over the same period.

Similarly, among students attending diploma and professional qualification courses, the proportion who commuted to school by MRT with a transfer to/from public bus increased from 34.9 per cent in 2010 to 46.0 per cent in 2015.

For secondary school students, those who used the public bus as the only mode of transport to school formed the biggest group at 39.3 per cent in 2015.

Another 24.9 per cent travelled to school by MRT only or MRT with a transfer to/from public bus.

No Transport Required	46.2	44.7	18.2	15.8	3.6	4.4	2.4	2.3	3.9	4.5

Travelling Time to School

The median travelling time to school was 45 minutes for students attending post-secondary (non-tertiary) and diploma and professional qualification courses, and 60 minutes for university students in 2015 (Chart 7.3). In comparison, the median travelling time was shorter for pre-primary and primary students (15 minutes) and secondary school students (30 minutes), reflecting the closer proximity of primary and secondary schools to the students' homes. The median duration of the time taken for students to travel to school increased between 2010 and 2015³.

Travelling Time to School by Planning Area

Resident students attending primary or pre-primary schools who were staying in Bishan and Bukit Timah had the longest median travelling time to school (20 minutes). The median travelling time to school was 15 minutes or less for those staying in other planning areas (Map 7.4).

³ Similar to the increase in median travelling time to work, the Household Interview Travel Survey (HITS) 2012 attributed the increase in median travelling time to school among students to the longer distances between their homes and schools. The HITS 2012 was conducted by the Land Transport Authority (LTA) between June 2012 and May 2013.

Glossary

GLOSSARY OF TERMS AND DEFINITIONS

DEMOGRAPHIC AND SOCIAL CHARACTERISTICS

Age

Age refers to the number of completed years between a person's date of birth and the reference date of 30 June 2015.

Ethnic/ Dialect Group

Ethnic group is as declared by the person. The population is classified into the following four categories:

<i>Chinese</i>	This refers to persons of Chinese origin such as Hokkiens, Teochews, Cantonese, Hakkas, Hainanese, Hockchias, Foochows, Henghuas, Shanghainese, etc.
<i>Malays</i>	This refers to persons of Malay or Indonesian origin, such as Javanese, Boyanese, Bugis, etc.
<i>Indians</i>	This refers to persons of Indian, Pakistani, Bangladeshi or Sri Lankan origin such as Tamils, Malayalis, Punjabis, Bengalis, Singhalese, etc.
<i>Other Ethnic Groups</i>	This comprises all persons other than Chinese, Malays and Indians. They include Eurasians, Caucasians, Japanese, Filipino, Vietnamese etc.

Residential Status

Singapore citizens and permanent residents are classified as Singapore residents or the resident population. Singapore permanent residents refer to non-citizens who have been granted permanent residence in Singapore. The non-resident population comprised foreigners who were working, studying or living in Singapore but not granted permanent residence, excluding tourists and short-term visitors.

Marital Status

Marital status refers to a person's conjugal status in relation to the marriage laws or customs in Singapore.

<i>Single</i>	This refers to persons who have never been married.
<i>Married</i>	This refers to persons who are legally married or married according to customary rites.

Widowed This refers to persons whose spouses are deceased and have not remarried.

Divorced/ Separated This refers to persons whose marriages have been legally dissolved, or persons who have been legally separated or estranged from their spouses and who have not remarried.

Ever-Married Females

Ever-married females refer to females who have been married before and are currently married, widowed, or divorced/separated.

Number of Children Born

Number of children born refers to all the live-born children each resident woman aged 15 years and over has ever given birth to. It includes those children who are currently staying with her, those who have set up their own homes and those who are no longer living.

Religion

Religion refers to the religious faith or spiritual belief of a person, regardless of whether he regularly attends religious ceremonies in a temple, mosque, church or other religious building. He may or may not practise his faith or belief. It is as declared by the person.

EDUCATION, LITERACY AND LANGUAGE

Literacy (Language Literate In)

This refers to a person's ability to read with understanding, e.g. a newspaper, in the language(s) specified.

Language Most Frequently Spoken at Home

Language most frequently spoken at home refers to the language or dialect that a person uses most frequently at home when speaking to other household member(s).

Level of Education Attending

Level of education attending refers to the grade or standard of formal education which a full-time student is attending. The Singapore Standard Educational

Classification 2015 is used to classify students by level of education attending. Students aged 5 years and over are classified into the following main categories:

<i>Pre-Primary</i>	This refers to students attending kindergartens or pre-primary classes.
<i>Primary</i>	This refers to students attending Primary 1 to 6 and special classes for the educationally sub-normal.
<i>Secondary</i>	This refers to students attending Secondary 1 to 5 or courses of secondary level offered in the vocational, technical and commercial education institutions, e.g. Institute of Technical Education (ITE) Skills Certificate course.
<i>Post-Secondary (Non-Tertiary)</i>	This refers to students attending Pre-University classes and junior colleges or other courses at post-secondary level, e.g. fifth or sixth year of the Integrated Programme, National ITE Certificate (Nitec), Higher Nitec and Master Nitec.
<i>Polytechnic</i>	This refers to students attending polytechnic diploma or polytechnic post/ advanced/ specialist/ management/ graduate diploma courses offered by the local polytechnics such as the Singapore Polytechnic, Ngee Ann Polytechnic, Temasek Polytechnic, Nanyang Polytechnic and Republic Polytechnic.
<i>Professional Qualification and Other Diploma</i>	This refers to students attending courses leading to the award of professional qualification and other diploma, e.g. ITE diploma, National Institute of Education (NIE) diploma, Singapore Institute of Management (SIM) diploma, LASALLE diploma, Nanyang Academy of Fine Arts (NAFA) diploma, Association of Chartered Certified Accountants (ACCA) Qualification and Chartered Financial Analyst (CFA).
<i>University</i>	This refers to students attending degree or postgraduate courses in universities. It also includes students attending postgraduate courses in postgraduate educational or training institutions.

Highest Qualification Attained

Highest qualification attained refers to the highest grade or standard a person has passed or the highest level where a certificate, diploma, or degree is awarded. The Singapore Standard Educational Classification 2015 is used to classify persons by highest qualification attained. Persons aged 15 years and over who are not attending educational institutions as full-time students are classified into the following main categories:

<i>No Qualification</i>	This refers to persons who have never attended school, or have primary education but without Primary School Leaving Examination (PSLE) certificate or their equivalent, or have Certificate in Basic Education for Skills Training (BEST) 1-3.
-------------------------	--

<i>Primary</i>	This refers to persons who have PSLE or other certificate of equivalent standard, or have Certificate in BEST 4 or at least 3 Employability Skills Systems (ESS) Workplace Literacy and Numeracy (WPLN) Statements of Attainment at Level 1 or 2.
<i>Lower Secondary</i>	This refers to persons who have secondary education without a General Certificate of Education (GCE) Normal ('N')/ Ordinary ('O') Level pass or equivalent, or have Certificate in Worker Improvement through Secondary Education (WISE) 1-3, or basic vocational certificates (including ITE Basic Vocational Training), or at least 3 ESS WPLN Statements of Attainment at Level 3 or 4.
<i>Secondary</i>	This refers to persons who have at least 1 GCE 'N'/ 'O' Level pass, or have National ITE Certificate (Intermediate) or equivalent (e.g. National Technical Certificate Grade 3, Certificate of Vocational Training), or have ITE Skills Certificate (ISC) or equivalent (e.g. Certificate of Competency, Certificate in Service Skills) or at least 3 ESS WPLN Statements of Attainment at Level 5 and above.
<i>Post-Secondary (Non-Tertiary)</i>	This refers to persons who have at least 1 GCE Advanced ('A')/ Higher 2 ('H2') Level pass or other certificates/ qualifications of equivalent standard. It also includes those who have Nitec (e.g. Post Nitec Certificate, Certificate in Office Skills, National Technical Certificate Grade 2, National Certificate in Nursing, Advanced Builder Certificate), or have Higher Nitec (including Certificate in Business Skills, Industrial Technician Certificate and other polytechnic certificates), or Master Nitec or equivalent (e.g. National Technical Certificate Grade 1). This group also includes Workforce Skills Qualifications (WSQ) Certificate/ Higher Certificate/ Advanced Certificate or equivalent, International Baccalaureate/ High school diploma or other advanced certificates (e.g. SIM certificates).
<i>Polytechnic</i>	This refers to persons who have polytechnic diploma, or polytechnic advanced diploma (including polytechnic advanced/ post/ specialist/ management/ graduate diploma), or polytechnic post-diploma certificate.
<i>Professional Qualification and Other Diploma</i>	This refers to persons who have qualifications awarded by professional bodies, or NIE diploma, ITE diploma and other diploma qualifications (e.g. SIM diploma, LASALLE diploma, NAFA diploma, WSQ diploma and WSQ specialist diploma).
<i>University</i>	This refers to persons who have bachelor degree, or postgraduate diploma (including NIE postgraduate diploma), or master's degree, or doctorate. It also includes persons with WSQ graduate certificate or WSQ graduate diploma.

Field of Study

Field of study refers to the principal discipline, branch or subject matter of study that leads to the award of the qualification attained. The Singapore Standard Educational Classification 2015 is used to classify the subject matter of study.

ECONOMIC CHARACTERISTICS

Economic Status

Persons aged 15 years and over are classified as either economically active or economically inactive.

Economically active persons refer to persons who were working and those who were actively looking for work if not working during the reference period.

Working A working person is one who during the reference period, worked for one hour or more either for pay or profit. It includes those serving National Service, as well as those who were helping in a family business without fixed pay. It also includes all those who had a job or business to return to but were temporarily absent because of illness, injury or other reasons.

Unemployed An unemployed person is one who was not working during the reference period but was actively looking for work and available for work. It also includes those who are not working but planning to start his own business or taking up a new job after the reference period.

Economically inactive persons refer to persons aged 15 years and over who are neither working nor unemployed during the reference period.

Occupation

Occupation of a working person refers to the kind of work the person was doing during the reference period, which may not necessarily be related to his training, skill or professional qualification. In the case of a person who performs two or more kinds of work, his occupation would refer to the one in which he usually works the longest hours during the reference period. The Singapore Standard Occupational Classification 2015 is used to classify working persons by occupation.

Industry

Industry refers to the major kind of economic activity or the nature of business of the establishment, enterprise, firm or organisation in which the person was employed during the reference period. If the person was self-employed, industry refers to the major kind of economic activity or nature of business the person was operating. The Singapore Standard Industrial Classification 2015 is used to classify all working persons by industry.

Employment Status

Employment status refers to the status of working persons in relation to their employment. Working persons aged 15 years and over are classified into the following categories:

<i>Employers</i>	These are persons who employ at least one paid worker in their business or trade.
<i>Own Account Workers</i>	These are persons who operate their own business without employing any paid workers in the conduct of their business or trade.
<i>Employees</i>	These are persons who work for employers in return for regular wages or salaries.
<i>Contributing Family Workers</i>	These are persons who assist in the operation of family business without receiving regular wages or salaries.

Usual Hours Worked

This refers to the number of hours that a person usually works in a typical week, regardless of whether he is paid or not. The concept of usual hours of work differs from that of normal hours of work referred to in contractual arrangements. For a person who has just started work during the reference period, usual hours of work refers to the number of hours per week he is expected to work in that job. For a multiple jobholder, it should be aggregated from the hours spent in all the jobs.

Gross Monthly Income from Work

This refers to the total amount of income earned from employment. For employees, it refers to the gross monthly wages or salaries before deduction of employee Central Provident Fund (CPF) contributions. It would include gross monthly wages or salaries, allowances, overtime, commission, tips and one-twelfth of annual bonuses. For employers and own account workers, it refers to the average monthly profits

from their business, trade or professional (i.e. total receipts from sales and services performed less the business expenses incurred). Data refers to income from work before accounting for Government transfers and taxes.

HOUSEHOLD AND HOUSING CHARACTERISTICS

Household

A household refers to a group of two or more persons living together in the same house and sharing common food or other arrangements for essential living. It also includes a person living alone or a person living with others but having his own food arrangements. Although persons may be living in the same house, they may not be members of the same household.

Resident Household

A resident household refers to a household headed by a Singapore citizen or permanent resident.

Head of Household

The head of a household is the person generally acknowledged as such by other members of the household. The person acknowledged as the head by other members of the household is normally the oldest member, the main income earner, the owner-occupier of the house or the person who manages the affairs of the household. Where the household comprises a group of unrelated persons, the head of household refers to the person who manages the affairs of the household, or any person who supplied the information pertaining to other members.

Household Structure

Household structure refers to the classification of a household according to the number of family nuclei and generations in the household.

A family nucleus in a household can be formed by:

- (a) a married couple without children;
- (b) a married couple with never-married child(ren); or
- (c) one parent with never-married child(ren).

Each nucleus comprises one or more generations.

A household can have one family nucleus, multiple family nuclei or none.

Household with no family nucleus refers to a household formed by a person living alone or living with others but does not constitute any family nucleus. This is further classified into one-person household or household with more than one person.

Household Living Arrangement

Household living arrangement refers to the classification of a household according to the household composition, age and marital status of household head and age group of the youngest child of head. Households are broadly classified into:

Married Couple-based Refers to households with a married head and spouse. This category is further split into those living with children and without children.

Other Households with Family Nucleus Includes lone parent households whose head is never-married/ widowed/ divorced/ separated and living with children aged below 16 years or never-married children as well as other types of households with a family nucleus. For example, a divorced household head living with elderly parents only, or a widowed household head living with the son and daughter-in-law.

Other Households without Family Nucleus Refers to other types of households without a family nucleus, including one-person households. For example, a never-married household head living with never-married siblings, a household head living with unrelated persons only and an ever-married person who is living alone as the children have grown up and moved out from the parental home.

Household Size

Household size refers to the total number of members in the household, including maids.

Number of Working Persons in Household

The number of working persons in the household includes members of the same household who were working. Maids in the household are excluded.

Household Income from Work

Household income from work refers to the sum of income received by working members of the household from employment and business. It includes one-twelfth of the annual bonus. However, it does not include the income of maids. Data refers to household income from work before accounting for Government transfers and taxes.

Household Income from Work Per Household Member

Household income from work per household member refers to the household income from work divided by the total number of members (household size) in the household. For example, if only one person in a household of four is working, his income is divided by four to derive the average income per household member.

Predominant Household Language

Predominant household language refers to the language or dialect spoken by the majority of household members to other members, excluding maids and unrelated persons.

Living Arrangement of Residents aged 65 years and over

Residents aged 65 years and over are classified according to their co-residence with their spouse or children. Additional dimension on the economic status of the children is incorporated into the classification.

With At Least One Working Child This refers to a resident aged 65 years and over living with his/her children in the same household, at least one of whom is working.

With All Non-working Children This refers to a resident aged 65 years and over living with his/her children in the same household, all of whom are not working.

Residents aged 65 years and over who are not living with their spouse or children are classified according to whether they are living alone or with other counterparts. Residents aged 65 years and over living alone refer to those in one-person households, with or without other occupants in the same dwelling unit.

Type of Dwelling

A dwelling refers to a building or part of a building used or intended to be used by one or more persons as living quarters. Each dwelling has its own separate entrance(s) with direct access to a public road or pathway. A dwelling may be a residential building by itself, or a unit in a residential building, or part of a non-residential building such as a shop or factory with space used as living quarters.

The dwellings covered are broadly classified into these three housing unit categories: Housing and Development Board (HDB) properties, condominiums and other apartments, and landed properties.

The Singapore Standard Classification of Type of Dwelling (Jan 2012) is used to classify the population and households by type of dwelling.

Tenancy

Tenancy refers to the tenure status of the household with respect to the dwelling in which the household members live. Tenancy is classified as follows:

<i>Owner</i>	This refers to a household where the household head or any other member owns the house.
<i>Non-Owner</i>	This includes: <i>Tenant</i> where a household rents the dwelling or part of it; and <i>Others</i> where a household occupies a dwelling provided without charge by employers, friends or relatives.

GEOGRAPHIC DISTRIBUTION AND TRANSPORT

Planning Areas

Planning areas refer to areas demarcated in the Urban Development Authority's Master Plan 2014.

Usual Mode of Transport to School or Work

Usual mode of transport to school or work refers to how a full-time student or a working person usually travels to school or work respectively. Persons who usually walk to school or work and persons who study from home or work from their place of residence are classified in the category "No transport required".

Travel Time to School or Work

Travel time to school or work refers to the total number of minutes that a full-time student or working person usually takes to get from home to school or to work each day respectively. The travel time includes time spent waiting for public transportation, walking to the bus-stop or MRT station etc.

Appendix

Sample Design and Sampling Variability

Sample Design and Selection

The sample for the General Household Survey (GHS) 2015 was selected from a sampling frame comprising all residential dwelling units in Singapore. As the sample survey of the GHS 2015 covered only households in residential dwellings, institutions such as military camps, hostels and hotels were excluded from the frame.

The sample was selected based on a stratified design with proportional allocation. Dwelling units in the sampling frame were divided into different groups (or strata). The groups are defined based on the planning areas demarcated by the Urban Redevelopment Authority and broad dwelling type groups. A random sample was then selected proportionally from the different groups by systematic sampling with a random start. The samples selected from each group were combined to form the required sample of 33,000 dwelling units.

Sampling Variability

The precision of estimates derived from the sample survey are affected by sampling errors since the estimates are based on information obtained from a fraction of the population instead of the whole population. Sampling errors refer to the difference between the estimate based on a sample and its 'true' population value that would result if the whole population has been surveyed.

The extent of sampling error of an estimate under a particular sample design is assessed by the variability of the estimate across all possible samples under the design. One common measure of this variability is given by the standard error (SE), which is the standard deviation of the sampling distribution of the estimate. Another measure is the relative standard error (RSE), which is obtained by expressing the standard error as a percentage to the estimate. The smaller the RSE, the more precise is the estimate.

Generalized Sampling Errors Table

From Table A1, the DEFT¹ for most of the selected attributes (T_Y) is about 1. It is impractical to compute and display the sampling error for each and every of the possible estimates such as the total number of elements in the population with a given attribute Y from the GHS 2015. Thus, a generalized sampling errors table is provided instead as a guide to data users for estimating the errors of any estimates.

Table A2 provides the generalised sampling errors of a selected range of estimates with DEFT value of 1. The smaller the estimate, the larger is the RSE. This implies that sample estimates of a rare characteristic would have high RSEs and users would have to be careful in drawing inferences based on the sample estimates.

Table A1 Sampling Errors and DEFT of T_Y for Selected Attributes, GHS 2015

	Sample Estimate (‘000)	Standard Error (T_Y)	Relative Standard Error (T_Y)	95% Confidence Interval (‘000)		DEFT (T_Y)
				Lower	Upper	
<u>Residents Aged 15 Years & Over</u>						
Single	1,034.5	7,224	0.7	1,020.4	1,048.7	1.13
Married	1,945.6	8,157	0.4	1,929.7	1,961.6	1.07
Widowed	172.1	2,645	1.5	166.9	177.3	0.91
Divorced/Separated	123.6	2,399	1.9	118.9	128.3	0.96
<u>Residents Aged 15 Years & Over</u>						
Buddhism	1,087.3	9,989	0.9	1,067.7	1,106.9	1.53
Taoism	326.4	6,089	1.9	314.4	338.3	1.54
Christianity	616.1	7,796	1.3	600.8	631.4	1.49
Islam	459.8	8,202	1.8	443.7	475.8	1.78
Hinduism	162.5	4,606	2.8	153.5	171.5	1.62
Other Religions	19.4	1,560	8.0	16.3	22.5	1.56
No Religion	604.5	7,293	1.2	590.2	618.8	1.40
<u>Ever-Married Resident Females Aged 40-49 Years</u>						
With No Children Born	31.5	1,222	3.9	29.1	33.9	0.96
With 1 Child Born	60.6	1,689	2.8	57.3	63.9	0.96
With 2 Children Born	115.2	2,249	2.0	110.8	119.6	0.94
With 3 Children Born	49.0	1,493	3.0	46.1	52.0	0.95
With 4 or More Children Born	15.2	838	5.5	13.6	16.9	0.95

¹ The DEFT is the ratio of the standard error of the estimate, under the sample design used, to that of a simple random sample. This ratio measures the effect of the complexity of the sample design on the standard error.

Table A1 Sampling Errors and DEFT of TY for Selected Attributes, GHS 2015 (cont'd)

	Sample Estimate (‘000)	Standard Error (T _y)	Relative Standard Error (T _y)	95% Confidence Interval (‘000)		DEFT (T _y)
				Lower	Upper	
<u>Residents* Aged 25 Years & Over</u>						
With Below Secondary Qualifications	800.0	6,351	0.8	787.5	812.4	1.09
With Secondary Qualifications	519.2	4,958	1.0	509.4	528.9	1.02
With Post-Secondary (Non-Tertiary) Qualifications	250.5	3,494	1.4	243.6	257.3	1.00
With Diploma and Professional Qualifications	405.5	4,453	1.1	396.7	414.2	1.02
With University Qualifications	775.8	6,637	0.9	762.8	788.8	1.15
<u>Residents Aged 5 Years & Over</u>						
English Most Frequently Spoken at Home	1,303.0	11,661	0.9	1,280.1	1,325.9	1.68
Mandarin Most Frequently Spoken at Home	1,231.9	11,288	0.9	1,209.7	1,254.0	1.66
Malay Most Frequently Spoken at Home	378.7	8,078	2.1	362.8	394.5	1.91
Tamil Most Frequently Spoken at Home	117.1	4,333	3.7	108.6	125.5	1.79
<u>Residents Aged 15 Years & Over</u>						
Literate in English	2,634.3	10,293	0.4	2,614.1	2,654.4	1.36
Literate in Two or More Languages	2,321.6	10,200	0.4	2,301.6	2,341.6	1.33
<u>Resident Working Persons Aged 15 Years & Over</u>						
Travel to Work by Public Bus Only	353.6	4428	1.3	345.0	362.3	1.08
Travel to Work by MRT Only	257.7	3884	1.5	250.1	265.3	1.10
Travel to Work by MRT and Public Bus Only	533.4	5467	1.0	522.7	544.1	1.11
Travel to Work by Car Only	470.0	5024	1.1	460.1	479.8	1.08
<u>Resident Households</u>						
With 1 Person	146.0	2,479	1.7	141.2	150.9	0.96
With 2 Persons	259.2	3,113	1.2	253.1	265.3	0.95
With 3 Persons	256.2	3,104	1.2	250.1	262.3	0.95
With 4 Persons	282.2	3,219	1.1	275.9	288.5	0.95
With 5 Persons	164.0	2,617	1.6	158.9	169.2	0.96
With 6 or More Persons	117.6	2,269	1.9	113.1	122.0	0.97

* Data pertain to residents who are not attending educational institutions as full-time students. The data include those who are upgrading their qualifications through part-time courses while working.

Table A2 Sampling Errors for Square Root of Design Effect (DEFT) Equals 1

Size of Estimates	Proportion of Total Population (%)	Standard Error	Relative Standard Error (%)	95% Confidence Interval	
				Lower	Upper

SINGAPORE DEPARTMENT OF STATISTICS INFORMATION DISSEMINATION SERVICES

Statistics Singapore Website

The *Statistics Singapore Website* was launched by the Singapore Department of Statistics (DOS) in January 1995. Internet users can access the website by connecting to:

<http://www.singstat.gov.sg>

Key Singapore statistics are available via the following sections:

- **Statistics**
which provides access to the latest statistical findings of DOS as well as statistics compiled by Research and Statistics Units (RSUs) in ministries and statutory boards.
- **News**
which provides a listing of the news released by DOS and RSUs.
- **Publications**
which presents the latest editions of DOS' publications, papers and articles.
- **Browse by Themes**
which presents official statistics compiled by DOS and RSUs in the various ministries and statutory boards according to themes. Within each theme, relevant statistics and related press releases, publications and references are provided.

Statistical resources are available via:

- **Publication and Papers**
which lists the latest editions of publications released by DOS according to statistical domains at <http://www.singstat.gov.sg/publications/publications-and-papers>. All softcopy DOS publications are available for free downloading. Statistical tables of DOS publications in Excel format are also available.
- **Advance Release Calendar**
which provides a six months ahead advance release calendar of key statistical indicators.

The website also provides a convenient gateway to international statistical websites under the "Methodologies & Standards" section:

- **Guide to International Statistics**
which provides hyperlinks to international databases and classifications, as well as websites of international bodies and other national statistical offices.
- **IMF Dissemination Standards Bulletin Board**
which provides metadata about Singapore's key indicators in the real, fiscal, financial and external sectors, including dissemination practices and information about pre-release access of current indicators.

SingStat Express

SingStat Express is a personalised data delivery service which sends the latest press releases, notices of publication, newsletter, occasional and information papers to subscribers via email. SMS alert service is also available to local users. Subscription details are available from the *Statistics Singapore Website* (<http://www.singstat.gov.sg/express>).

SINGAPORE DEPARTMENT OF STATISTICS
INFORMATION DISSEMINATION SERVICES (*cont'd*)

Really Simple Syndication

Really Simple Syndication (RSS) is an easy way to stay updated on the latest statistical news released via the *Statistics Singapore Website*. The SingStat RSS feed delivers statistical news highlights and hyperlinks to the source documents whenever the updates are posted. More information is available at [http://www.singstat.gov.sg/services/really-simple-syndication-\(rss\)](http://www.singstat.gov.sg/services/really-simple-syndication-(rss)).

SingStat Mobile App

SingStat Mobile App provides users with ready access to the latest key Singapore official statistics through their mobile devices while on the go. Users may visualize data for the latest periods with some 200 charts of commonly used statistics from 25 data categories. The app is available for downloading in iOS and Android devices. More information is available at <http://www.singstat.gov.sg/services/singstat-mobile-app>

SingStat Table Builder

The *SingStat Table Builder* contains statistical data series on the Singapore economy and population for users to create customised data tables, plot graphs and charts and export them in different file formats. Explore data trends with this e-service at <http://www.singstat.gov.sg/tablebuilder>.

E-survey

The *E-survey* enables business organisations to complete and submit their survey forms through the internet. Using secured encryption protocols, the *E-survey* ensures that the information transmitted through the net is secured and protected. The system features online helps and validation checks to assist respondents in completing their survey forms. With the *E-survey*, respondents do away with the tedious paper work and manual tasks of mailing or faxing their survey returns to the Department.

Statistical Enquiries and Feedback

If you have any statistical enquiries or comment or suggestions on our statistical publications and electronic services, you are welcomed to:

 E-mail us at **info@singstat.gov.sg**

 Fax to us at **(65) 6332-7689**

 Call us at **1800-3238118* (local callers)**

(65) 6332-7738 (overseas callers)

* Calls from mobile telephone lines to 1800 local toll free number may be subject to mobile airtime charges as imposed by the relevant mobile service provider.
