Import Price Index (2023 = 100)

April 2026

Month-on-Month Change

The Import Price Index fell 0.3% in April 2026, in contrast to the 17.1% increase in March 2026. The Oil index dropped 2.6%, as compared to the 78.9% surge in the previous month, mainly due to lower prices of petroleum and products. The Non-oil index rose 0.8% in April 2026, following the 0.8% increase in March 2026.

The increase in the Non-oil index was due to the Machinery & Transport Equipment, Chemicals & Chemical Products, Manufactured Goods, Beverages & Tobacco, Animal & Vegetable Oils and Crude Materials indices. The gains were partially offset by decreases in the Miscellaneous Manufactured Articles and Food & Live Animals indices.

Year-on-Year Change

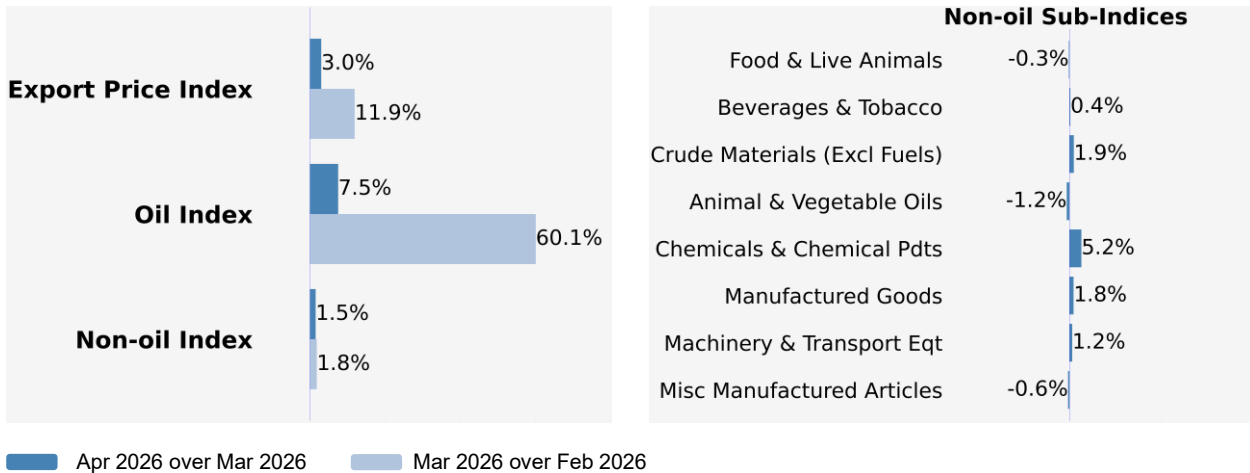

The Import Price Index rose 18.4% in April 2026 from a year ago, continuing the 17.1% increase in March 2026. The Oil and Non-oil indices gained 72.6% and 3.6% respectively.

Among the Non-oil sub-indices, the increase was due to the Machinery & Transport Equipment index, attributed to higher prices of electrical machinery apparatus, as well as the Miscellaneous Manufactured Articles, Manufactured Goods, Crude Materials, Chemicals & Chemical Products and Animal & Vegetable Oils indices. The increases were partially moderated by declines in the Food & Live Animals and Beverages & Tobacco indices.

Export Price Index (2023 = 100) April 2026

Month-on-Month Change

The Export Price Index rose 3.0% in April 2026, extending the 11.9% increase in March 2026. The Oil index gained 7.5%, easing from the 60.1% increase in the previous month, mainly due to higher prices of petroleum and products. The Non-oil index rose 1.5% in April 2026, continuing the 1.8% increase in March 2026.

The increase in the Non-oil index was mainly driven by the Chemicals & Chemical Products index, resulting from higher prices of plastics in primary forms, as well as the Machinery & Transport Equipment, Manufactured Goods, Crude Materials and Beverages & Tobacco indices. The gains were partially offset by decreases in the Miscellaneous Manufactured Articles, Food & Live Animals and Animal & Vegetable Oils indices.

Year-on-Year Change

The Export Price Index rose 13.3% in April 2026 from a year ago, following the 8.7% increase in March 2026. The Oil and Non-oil indices increased 67.2% and 1.9% respectively.

Among the Non-oil sub-indices, the increase was due to the Machinery & Transport Equipment index, stemming from higher prices of electrical machinery apparatus, as well as the Chemicals & Chemical Products, Miscellaneous Manufactured Articles, Manufactured Goods and Crude Materials indices. The increases were partially moderated by declines in the Food & Live Animals, Beverages & Tobacco and Animal & Vegetable Oils indices.

Technical Note

The **Import Price Index (IPI)** is used primarily as an indicator to track the price trends of imported goods into Singapore. Prices of imports, valued at CIF terms (cost, insurance and freight) are obtained monthly from major importers. The weighting pattern of the index is derived from import statistics for 2023.

The **Export Price Index (EPI)** measures changes in the price of all exports of merchandise from Singapore, including re-exports. In general, prices are obtained from major exporters of the selected commodities. Prices used in the index computation, are the prices of goods that physically leave Singapore's main ports of export; also termed as Free on Board (FOB) prices. The weights of the index are derived from the distribution of export by commodity in 2023.

The IPI and EPI have consistently recorded response rates of about 80% respectively for each reference month, based on total import and export values of all selected commodities where price data could be collected from surveys and administrative sources.

Index Formula

The 2023-based series is compiled using the Laspeyres formula where the price and weight reference periods are aligned to the year 2023. The geometric mean formula has been adopted in the computation of unweighted elementary aggregate price indices. The arithmetic mean formula is applied in compiling indices at higher levels of aggregation where weights of specific sub-indices are available.

Measurement of Changes in Price Indices

Change over previous month compares the index of the month with that of the preceding month. Such comparisons measure the change in the price index between two consecutive months. They serve as useful short-term indicators of the price movements.

Change over same period of previous year measures change in the index over a twelve-month period. Such comparisons compare the movement in the price index between similar months in two consecutive years.

Linking the Old 2018-Based Price Index Series to the New 2023-Based Price Index Series

The IPI and EPI have been rebased from base year 2018 to base year 2023. To facilitate comparison of the historical price indices across base years, the old 2018-based series are linked to the new 2023-based series by re-scaling them via a Linked Coefficient. The Linked Coefficient is the ratio of the annual 2023-based index in 2023 to the annual 2018-based index in 2023.

Example: Linking the old Iron & Steel Index series for IPI prior to 2023, to the 2023-based Iron & Steel Index (2023=100)

1) Calculate the linked coefficient

Year	Iron & Steel Index (2018=100)	Iron & Steel Index (2023=100)	Linked Coefficient
2023	117.2	100.0	$100.0 \div 117.2 = 0.853$

2) Re-scaling the old series to the 2023-based series using the Linked Coefficient

Year	Month	Iron & Steel Index (2018=100)	Iron & Steel Index (2023=100)
2021	Dec	130.3	$130.3 \times 0.853 = 111.1$
2022	Jan	128.7	$128.7 \times 0.853 = 109.8$

Rescaling the 2023-Based Index Series to Previous Years

To continue the old index series going forward in time, re-scale the new 2023-based index series to the old base year level, via a Rescaling Coefficient. The Rescaling Coefficient is the ratio of the annual 2023-based index in 2023 to the annual 2023-based index in the old base year.

Example: Rescaling the new 2023-based Iron & Steel Index series for IPI to the 2018-based Iron & Steel Index (2018=100)

1) Calculate the rescaling coefficient

Base Year	Annual Iron & Steel Index in 2023	Annual Iron & Steel Index in 2018	Linked Coefficient
2023	100.0	85.3	$100.0 \div 85.3 = 1.172$

2) Re-scaling the new series to the 2018-based series using the Rescaling Coefficient

Year	Month	Iron & Steel Index (2023=100)	Iron & Steel Index (2018=100)
2024	Jan	95.6	$95.6 \times 1.172 = 112.0$
2024	Feb	95.3	$95.3 \times 1.172 = 111.7$

Index Revision

The indices may be revised when late returns and amendments received from respondents are incorporated.

Dissemination of Data

The Import and Export Price Indices are available on the SingStat Website (<https://tablebuilder.singstat.gov.sg/>).

For more information about the indices, please refer to the [Catalogue of Products](#) in Page 12.
