

# Supply & Use Tables Made Easy

## What are Supply & Use Tables (SUTs)?

SUTs provide a detailed depiction of the:

-  Flows of goods and services
-  Value added generated by industries
-  Costs of inputs incurred

## 1. Total Supply Table

The total supply table presents the goods and services produced by industries and imported from the rest of the world.

The diagonal entries represent the primary output of the industries while the smaller values on the off-diagonal entries are secondary output.

## 2. Total Use Table

The total use table comprises three smaller tables:

### Intermediate Use

The intermediate use table presents the goods and services purchased by industries as inputs for production.

### Final Use

The final use table presents the goods and services purchased:

- by Households and Non-Profit Institutions Serving Households (NPISHs)
- by Government
- for Gross Capital Formation
- by Rest of the world as exports

### Value Added

The value added table shows the wages, production taxes and operating surplus generated by each industry.
